

Close Brothers Group plc

Pillar 3 disclosures for the year ended 31 July 2024

Contents

1	Executive Summary
3	Annex I: Key metrics and overview of risk-weighted exposure amounts
3	UK KM1 – Key metrics
5	IFRS 9 / Article 468 – IFRS 9 transitional arrangements disclosure
5	UK KM2 – Key metrics – MREL
5	UK OV1 – Overview of risk-weighted exposure amounts
6	UK INS1 – Insurance participation
6	UK INS2 – Financial conglomerates information on own funds and capital adequacy ratio
6	UK OVC – ICAAP information
8	Annex III: Risk management policies and objectives
8	UK OVA – Risk management approach
15	UK OVB – Governance arrangements
17	Annex V: Scope of application
18	UK LI1 – Differences between accounting and regulatory scopes of consolidation and mapping of financial statement categories with regulatory risk categories
19	UK LI2 – Main sources of differences between regulatory exposure amounts and carrying values in financial statements
19	UK LI3 – Outline of the differences in the scopes of consolidation – entity by entity
17	UK LIA – Explanations of differences between accounting and regulatory exposure amounts
17	UK LIB – Other qualitative information on the scope of application
20	UK PV1 – Prudent valuation adjustments
21	Annex VII: Own funds
21	Regulatory Capital
21	Movement in CET1 capital
22	UK CC1 – Composition of regulatory own funds
23	UK CC2 – Reconciliation of regulatory own funds to balance sheet in the audited financial statements
24	UK CCA – Main features of regulatory own funds instruments and eligible liabilities instruments
26	Annex IX: Countercyclical capital buffers
26	UK CCyB1 – Geographical distribution of credit exposures relevant for the calculation of the countercyclical buffer
26	UK CCyB2 – Amount of institution-specific countercyclical capital buffer
27	Annex XI: Leverage ratio
27	UK LR1 – LRSum: Summary reconciliation of accounting assets and leverage ratio exposures
28	UK LR2 – LRCom: Leverage ratio common disclosure
29	UK LR3 – LRSpl: Split-up of on balance sheet exposures
27	UK LRA – Disclosure of LR qualitative information
30	Annex XIII: Liquidity requirements
30	UK LIQA – Liquidity risk management
32	UK LIQ1 – Quantitative information of LCR
32	UK LIQB – Quantitative information on LCR, which compliments template UK LIQ1
34	UK LIQ2 – Net Stable Funding Ratio (NSFR)

35 Annex XV: Credit risk quality

- 35 UK CRA – General qualitative information about credit risk
- 36 UK CRB – Additional information related to the credit quality of assets
- 37 UK CR1 – Performing and non-performing exposures and related provisions
- 38 UK CR1-A – Maturity of exposures
- 38 UK CR2 – Changes in the stock of non-performing loans and advances
- 38 UK CR2-A – Changes in the stock of non-performing loans and advances and related net accumulated recoveries
- 39 UK CQ1 – Credit quality of forborne exposures
- 39 UK CQ2 – Quality of forbearance
- 40 UK CQ3 – Credit quality of performing and non-performing exposures by past due days
- 41 UK CQ4 – Quality of non-performing exposures by geography
- 41 UK CQ5 – Credit quality of loans and advances to non-financial corporations by industry
- 42 UK CQ6 – Collateral valuation - loans and advances
- 42 UK CQ7 – Collateral obtained by taking possession and execution processes
- 42 UK CQ8 – Collateral obtained by taking possession and execution processes – vintage breakdown

43 Annex XVII: Credit risk mitigation (CRM) techniques

- 43 UK CRC – Information related to CRM techniques
- 43 UK CR3 – CRM techniques overview: Use of credit risk mitigation techniques

44 Annex XIX: Standardised approach

- 44 UK CRD – Information related to standardised model
- 45 UK CR4 – standardised approach – Credit risk exposure and CRM effects
- 46 UK CR5 – standardised approach

47 Annex XXI: IRB approach to credit risk

47 Annex XXIII: Specialised lending

47 Annex XXV: Counterparty credit risk

- 47 UK CCRA – Information related to CCR
- 47 UK CCR1 – Analysis of CCR exposure by approach
- 48 UK CCR2 – Transactions subject to own funds requirements for CVA risk
- 48 UK CCR3 – Standardised approach – CCR exposures by regulatory exposure class and risk weights
- 48 UK CCR4 – IRB approach – CCR exposures by exposure class and PD scale
- 49 UK CCR5 – Composition of collateral for CCR exposures
- 49 UK CCR6 – Credit derivative exposures
- 49 UK CCR7 – RWEA flow statements of CCR exposures under the IMM
- 50 UK CCR8 – Exposures to CCPs

51 Annex XXVII: Securitisation positions

- 51 UK SECA - Information on securitisations
- 53 UK SEC1 - Securitisation exposures in the non-trading book
- 53 UK SEC2 - Securitisation exposures in the trading book
- 54 UK SEC3 - Securitisation exposures in the non-trading book and associated regulatory capital requirements - institution acting as originator or as sponsor
- 54 UK SEC4 - Securitisation exposures in the non-trading book and associated regulatory capital requirements - institution acting as investor
- 55 UK SEC5 - Exposures securitised by the institution - exposures in default and specific credit risk adjustments

56 Annex XXIX: Standardised approach and internal model for market risk

- 56 UK MRA – Information related to market risk
 - 57 UK MR1 – Market risk under the standardised approach
 - 57 UK MRB – Information on the internal Market Risk Models
 - 57 UK MR2-A – Market Risk under the Internal Model Approach (IMA)
 - 57 UK MR2-B – RWA flow statements of market risk exposures under the IMA
 - 57 UK MR3 – IMA values for trading portfolios
 - 58 UK MR4 – Composition of VaR estimates with gains/losses
-

59	Annex XXXI: Operational risk
59	UK ORA – Information on operational risk
60	UK OR1 – Operational risk own funds requirements and risk-weighted exposure amounts

61	Annex XXXIII: Remuneration policy
61	UK REMA – Remuneration policy
66	UK REM5 – Information on remuneration of staff whose professional activities have a material impact on institutions' risk profile

67	Annex XXXV: Encumbered and unencumbered assets
67	UK AE1 – Encumbered and unencumbered assets
68	UK AE2 – Collateral received and own debt securities issued
68	UK AE3 – Sources of encumbrance
67	UK AE4 – Accompanying narrative information

69	Annex XXXVII: Interest rate risk in the banking book (IRRBB)
69	UK IRRBBA – IRRBB risk management objectives and policies
73	UK IRRBB1 – Quantitative information on IRRBB

Should you have any queries please e-mail: pillar3@closebrothers.com

Executive Summary

Background

The aim of the capital adequacy regime is to promote safety and soundness in the financial system. It is structured around three "pillars": Pillar 1 on minimum capital requirements; Pillar 2 on the supervisory review process; and Pillar 3 on market discipline. Pillar 3 requires firms to publish a set of disclosures which allow market participants to assess key pieces of information on that firm's capital, risk exposures and risk assessment process. The disclosures contained in this document cover the qualitative and quantitative disclosure requirements of Pillar 3, set out in the Capital Requirements Regulation as implemented in the PRA Rulebook CRR Instrument and the PRA Rulebook CRR Firms: Leverage Instrument (collectively known as "CRR"), and are based on data at 31 July 2024 with comparative figures for 31 July 2023 and 31 January 2024 where relevant. Within this document are references to the Close Brothers Group plc's Annual Report which can be found at: www.closebrothers.com/investor-relations/investor-information/results-reports-and-presentations

Scope

The Prudential Regulation Authority ("PRA") supervises Close Brothers Group plc ("CBG" or "the group") on a consolidated basis and receives information on the capital adequacy of, and sets capital requirements for, the group as a whole. In addition, a number of subsidiaries are regulated for prudential purposes by either the PRA or the Financial Conduct Authority ("FCA"). Close Brothers Limited ("CBL" or "the Banking division") is regulated under CRR. Close Asset Management Limited ("CBAM") and Winterflood Securities Limited ("Winterflood") are regulated under the FCA's Investment Firms Prudential Regime ("IFPR"). Details of the group's principal subsidiaries are included in note 28 of the group's Annual Report.

Summary of Key Metrics

The prudent management of the group's financial resources is a core part of our business model. Our primary objective is to deploy capital to support disciplined loan book growth in the Banking division and to make the most of strategic opportunities. These include strategic initiatives and small acquisitions in existing or adjacent markets that fit with our business model.

The group holds three classes of own funds, comprising common equity tier 1 ("CET1"), additional tier 1 ("AT1") capital, and tier 2 debt. The main features of these instruments are provided in template UK CCA on page 24. The composition of, and regulatory adjustments to, CET1 are provided in table UK CC1 on page 22.

Over the 2024 financial year, the CET1 capital ratio reduced from 13.3% to 12.8%, mainly driven by loan book growth (-c.100bps), a decrease in IFRS 9 transitional arrangements (-c.20bps), Bluestone Motor Finance (Ireland) DAC acquisition (-c.20bps) and AT1 coupon (-c.10bps). This was partly offset by profits for the current financial year (c.90bps).

CET1 capital increased 5% to £1,374.8 million (31 July 2023: £1,310.8 million), mainly driven by £100.4 million of profits, partly offset by the dividend paid and foreseen related to AT1 coupon of £15.0 million and a decrease in the transitional IFRS 9 add-back to capital of £19.7 million.

Tier 1 capital increased 20% to £1,574.8 million (31 July 2023: £1,310.8 million), driven by the issuance of the group's inaugural AT1 in a £200 million transaction to optimise the capital structure and provide further flexibility to grow the business. The transaction strengthened the regulatory capital position and was in line with the group's strategy and capital management framework.

Total capital increased 17% to £1,774.8 million (31 July 2023: £1,510.8 million), primarily reflecting the AT1 issuance.

RWAs increased 9% to £10.7 billion (31 July 2023: £9.8 billion), driven by loan book growth (c.£790 million) primarily in Commercial and Property, the acquisition of Bluestone Motor Finance (Ireland) DAC (c.£120 million), and a decrease in operational risk RWAs (c.£40 million) reflecting a reduction in average income in Winterflood partly offset by loan book growth.

As a result, CET1, tier 1 and total capital ratios were 12.8% (31 July 2023: 13.3%), 14.7% (31 July 2023: 13.3%) and 16.6% (31 July 2023: 15.3%), respectively.

The applicable CET1, tier 1 and total capital ratio requirements, including capital requirements directive ("CRD") buffers but excluding any applicable PRA buffer, were 9.7%, 11.4% and 13.7%, respectively. Accordingly, we continue to have headroom significantly above the applicable requirements of c.310bps in the CET1 capital ratio, c.330bps in the tier 1 capital ratio and c.290bps in the total capital ratio.

The leverage ratio, which is a transparent measure of capital strength not affected by risk weightings, increased to 12.7% (31 July 2023: 11.4%) primarily due to the increase in tier 1 capital.

The group applies IFRS 9 regulatory transitional arrangements which allow banks to add back to their capital base a proportion of the IFRS 9 impairment charges during the transitional period. Our capital and leverage ratios are presented on a transitional basis after the application of these arrangements. On a fully loaded basis, without their application, the CET1, tier 1 and total capital ratios would be 12.7%, 14.6% and 16.5%, respectively and the leverage ratio would be 12.7%. Disclosure relating to the IFRS 9 transitional arrangements is shown on page 5.

As outlined at the Half Year 2024 results, following our initial application to the PRA (in December 2020) to transition to the Internal Ratings Based ("IRB") approach, the application has successfully moved to Phase 2 of the process and engagement with the regulator continues. Our Motor Finance, Property Finance and Energy portfolios, where the use of models is most mature, were submitted with our initial application.

The group adopts a conservative stance on liquidity, ensuring it is comfortably ahead of both internal risk appetite and regulatory requirements. We regularly assess and stress test the group's liquidity requirements and continue to meet the liquidity coverage ratio ("LCR") regulatory requirements, with a 12-month average LCR to 31 July 2024 of 1,034% (2023: 1,143%). In addition to internal measures, we monitor funding risk based on the CRR rules for the net stable funding ratio ("NSFR"). The four-quarter average NSFR to 31 July 2024 was 134.4% (31 July 2023: 126.0%).

Close Brothers Limited

For liquidity and funding, the PRA supervises CBL on an individual basis, excluding all subsidiary undertakings. For capital and leverage, the PRA supervises CBL on an individual consolidation basis as permitted under CRR article 9. The individual consolidation group does not include all subsidiary undertakings and therefore differs to the CBL accounting consolidation group under IFRS. Details of the subsidiaries included within the individual consolidation are included in UK LIB on page 17. Differences between the CBL group and individual consolidations relate primarily to reserves held by entities that sit outside of the scope of individual consolidation but are included in the CBL group consolidation, and the impact from the RWAs of these entities.

The only quantitative disclosures for the individual consolidation included within this document are UK KM1 and the IFRS 9 transitional arrangements template. In line with CRR article 432, other templates are not disclosed on an individual basis as they are consistent with group disclosures or are not deemed materially different.

At 31 July 2024, CBL's CET1 capital ratio was 13.2% (31 July 2023: 12.4%). CBL's CET1 capital increased 16% to £1,326.4 million (31 July 2023: £1,139.6 million) mainly driven by £145.3 million of profits and a £65.0 million capital injection from the group. This was partly offset by the dividend paid and foreseen related to AT1 coupon of £15.0 million and a decrease in the IFRS 9 transitional add-back of £19.9 million.

RWAs increased to £10.0 billion (31 July 2023: £9.2 billion) mainly driven by loan book growth (c.£790 million) primarily in Commercial and Property and an increase in operational risk RWAs (c.£40 million), reflecting growth in the loan book.

Regulatory Developments

The PRA Policy Statement PS 9/24 Implementation of the Basel 3.1 standards near-final part 2 was published on 12 September 2024, with an implementation date of 1 January 2026, six months later than previously anticipated. The majority of rules applicable to the group remain unchanged, including the proposed removal of the small and medium-sized enterprises ("SME") supporting factor, new conversion factor for cancellable facilities and new market risk rules. As a result, we continue to expect implementation to result in an increase of up to c. 10% in the group's RWAs calculated under the standardised approach. However, the PRA has proposed to apply an SME lending adjustment as part of Pillar 2a, to ensure that the removal of the SME support factor under Pillar 1 does not result in an increase in overall capital requirements for SME lending. Whilst this adjustment is subject to PRA confirmation and a resulting restatement of the group's TCR, we would reasonably expect the UK implementation of Basel 3.1 to have a less significant impact on the group's overall capital headroom position than initially anticipated.

There are no planned increases in the UK countercyclical buffer ("CCyB") at this time, and the rate remains at 2%. During the 2024 financial year, a planned increase of 1% to the Ireland CCyB rate has come into effect, with an applicable rate of 1.5% in effect from 7 June 2024. This change had a minimal impact on the group's countercyclical buffer which remains at 1.9%.

Pillar 3 Policy and approval

These disclosures have been prepared, verified and approved under the group's Pillar 3 and regulatory reporting standards, which set out the internal processes and controls to verify that the disclosures are appropriate and in compliance with the requirements set out in CRR.

Full disclosures are issued as a minimum on an annual basis, with key metrics disclosed on a semi-annual basis, as the group meets the requirements of CRR article 433c. The disclosures are published on the group's website. These disclosures are not subject to audit except where they are equivalent to those prepared under accounting requirements for inclusion in the group's Annual Report. The group's Pillar 3 disclosures have been subject to senior first line and second line review (see page 12 for further details of our "three lines of defence" model), prior to review and endorsement by the Capital Adequacy Committee ("CAC"), the Group Asset and Liability Committee ("GALCO"), the Asset and Liability Committee ("ALCO") and the Remuneration Committee ("RemCo") as appropriate. Approval was given by the CBG board ("the board") on 18 September 2024.

"I attest that, to the best of my knowledge, these disclosures have been prepared in accordance with the group's formal policies and internal processes, systems and controls".

Mike Morgan, Group Finance Director

Annex I: Key metrics and overview of risk-weighted exposure amounts

UK KM1 – Key metrics

The table below provides a summary of the main prudential regulation ratios and measures for the group and for CBL on an individual basis.

1 Rows 14a-14e have been removed as only LREQ firms are required to disclose this information.

2 Figures presented are for the 12 month average to the period end.

3 Figures presented are for the four-quarter average to the period end.

4 Columns b and d have been removed as only required to disclose information on a semi-annual basis.

5 For capital and leverage, the PRA supervises CBL on an individual consolidation basis as permitted under CRR article 9. For liquidity and funding, the PRA supervises CBL on an individual basis, excluding all subsidiary undertakings.

Regulatory capital and RWAs

Over the 2024 financial year, the CET1 capital ratio reduced from 13.3% to 12.8%, mainly driven by loan book growth (-c.100bps), a decrease in IFRS 9 transitional arrangements (-c.20bps), Bluestone Motor Finance (Ireland) DAC acquisition (-c.20bps) and AT1 coupon (-c.10bps). This was partly offset by profits for the current financial year (c.90bps).

CET1 capital increased 5% to £1,374.8 million (31 July 2023: £1,310.8 million), mainly driven by £100.4 million of profits, partly offset by the dividend paid and foreseen related to AT1 coupon of £15.0 million and a decrease in the transitional IFRS 9 add-back to capital of £19.7 million.

Tier 1 capital increased 20% to £1,574.8 million (31 July 2023: £1,310.8 million) and total capital increased 17% to £1,774.8 million (31 July 2023: £1,510.8 million), driven by the issuance of the group's inaugural AT1 in a £200 million transaction to optimise the capital structure and provide further flexibility to grow the business.

RWAs increased 9% to £10.7 billion (31 July 2023: £9.8 billion), driven by loan book growth (c.£790 million) primarily in Commercial and Property, and the acquisition of Bluestone Motor Finance (Ireland) DAC (c.£120 million) and a decrease in operational risk RWAs (c.£40 million) reflecting a reduction in average income in Winterflood partly offset by loan book growth.

During the 2024 financial year, the PRA reset the group's Pillar 2a requirements from 1% of RWAs to 1.3%, and a higher countercyclical buffer rate for our Irish exposures has come into force. This change had a minimal impact on the group's overall countercyclical buffer which remains at 1.9%. As a result, the applicable minimum total capital ratio requirement, including CRD buffers but excluding any applicable PRA buffer, was 13.7% at 31 July 2024.

For more information on capital, RWAs and capital ratios, see template UK OV1 and Annex VII.

Leverage

The leverage ratio, which is a transparent measure of capital strength not affected by risk weightings, has increased to 12.7% (31 July 2023: 11.4%), primarily due to the increase in tier 1 capital as described above. For more information on leverage see Annex XI.

Liquidity and funding

The 12-month average LCR has decreased to 1,034% (31 July 2023: 1,143%) due to net outflows increasing at a higher rate than the liquid asset buffer. High quality liquid assets ("HQLAs") increased 14% to £2,196.0 million (31 July 2023: £1,931.8 million) due to an increase unencumbered securities. Net cash outflows increased 26% to £212.4 million (31 July 2023: £169.0 million) with growth in the retail Easy Access product and shortened tenors in unsecured wholesale funding. For more information on the LCR see Annex XIII.

The four-quarter average NSFR increased to 134.4% (31 July 2023: 126.0%) reflecting growth in the retail deposit base. For more information on the NSFR see Annex XIII.

IFRS 9 transitional arrangements disclosure

The following table shows the capital, RWA and leverage positions with and without the application of IFRS 9 transitional arrangements for the group and for CBL on an individual consolidation basis.

£m		Group		Individual	
		a	b	a	b
		31 Jul 2024	31 Jul 2023	31 Jul 2024	31 Jul 2023
Available capital					
1	CET1 capital	1,374.8	1,310.8	1,326.4	1,139.6
2	CET1 capital as if IFRS 9 transitional arrangements had not been applied	1,362.7	1,278.9	1,314.5	1,107.7
3	Tier 1 capital	1,574.8	1,310.8	1,526.4	1,139.6
4	Tier 1 capital as if IFRS 9 transitional arrangements had not been applied	1,562.7	1,278.9	1,514.5	1,107.7
5	Total capital	1,774.8	1,510.8	1,726.4	1,339.6
6	Total capital as if IFRS 9 transitional arrangements had not been applied	1,762.7	1,478.9	1,714.5	1,307.7
Risk-weighted assets					
7	Total risk-weighted assets	10,701.2	9,847.6	10,033.9	9,159.2
8	Total risk-weighted assets as if IFRS 9 transitional arrangements had not been applied	10,689.2	9,818.8	10,022.0	9,130.3
Capital ratios (%)					
9	CET1 ratio	12.8	13.3	13.2	12.4
10	CET1 ratio as if IFRS 9 transitional arrangements had not been applied	12.7	13.0	13.1	12.1
11	Tier 1 ratio	14.7	13.3	15.2	12.4
12	Tier 1 ratio as if IFRS 9 transitional arrangements had not been applied	14.6	13.0	15.1	12.1
13	Total capital ratio	16.6	15.3	17.2	14.6
14	Total capital ratio as if IFRS 9 transitional arrangements had not been applied	16.5	15.1	17.1	14.3
Leverage ratio					
15	Leverage ratio total exposure measure	12,354.5	11,495.0	11,399.2	10,540.3
15a	Leverage ratio total exposure measure as if IFRS 9 transitional arrangements had not been applied	12,342.4	11,463.2	11,387.2	10,508.4
16	Leverage ratio (%)	12.7	11.4	13.4	10.8
17	Leverage ratio as if IFRS 9 transitional arrangements had not been applied (%)	12.7	11.2	13.3	10.5

The group applies IFRS 9 regulatory transitional arrangements which allow banks to add back to their capital base a proportion of the IFRS 9 impairment charges during the transitional period. In accordance with CRR article 473a, during the 2024 financial year, transitional arrangements are no longer being applied for relevant IFRS 9 provisions raised before 1 January 2020, and a transitional percentage of 50% has been applied for relevant provisions raised after 1 January 2020 (31 July 2023: 25% and 75% respectively).

UK KM2 – Key metrics – MREL

The group does not have any additional MREL requirements as laid down in CRR articles 92a or 92b so this template has not been presented.

UK OV1 – Overview of risk weighted exposure amounts

The table below shows risk weighted assets, here referred to as risk weighted exposure amounts ("RWEAs") and own funds requirements, calculated as 8% of RWAs, by risk type and approach.

£m		a	b	c
		Risk weighted exposure amounts (RWEAs)		Total own funds requirements
		31 Jul 2024	31 Jul 2023	31 Jul 2024
1	Credit risk (excluding CCR)	9,429.3	8,603.5	754.3
2	<i>Of which the standardised approach</i>	9,429.3	8,603.5	754.3
3	<i>Of which the foundation IRB (FIRB) approach</i>	—	—	—

29	Total²	10,701.2	9,847.6	856.1

1 Securitisation exposures are associated with the retained securitisation positions the group holds as a result of the acquisition of Bluestone Motor Finance (Ireland) DAC during the financial year.

2 For more information on movements in RWAs and the CET1 capital ratio, see template 'Regulatory capital' in Annex VII.

RWAs increased to £10,701.2 million (31 July 2023: £9,847.6 million), driven by loan book growth (c.£790 million) primarily in Commercial and Property, and the acquisition of Bluestone Motor Finance (Ireland) DAC (c.£120 million), partly offset by a decrease in operational risk RWAs (c.£40 million), reflecting a reduction in average income in Winterflood partly offset by loan book growth.

UK INS1 – Insurance participation

The group has no own funds held in insurance or reinsurance firms so this template has not been presented.

UK INS2 – Financial conglomerates information on own funds and capital adequacy ratio

The group does not qualify as a financial conglomerate so this template has not been presented.

UK OVC – Internal capital adequacy assessment process ("ICAAP") information

(a) Approach to assessing the adequacy of the internal capital (Article 438(a) CRR)

The group undertakes a group-wide internal capital adequacy assessment annually which is an integral part of the group's risk management processes. The main outputs from the process are an assessment of all material capital risks faced by the group, determination of the level of capital required to be held against each major source of risk and an analysis of a number of severe stress tests over a three-year time horizon, which is the group's standard business planning timescale. Management at all levels within the group are involved in carrying out risk assessments for their business units, having input into stress testing and scenario analysis and where necessary approving inputs into the process. The ICAAP is subject to detailed review and challenge by both the CAC and the Group Risk and Compliance Committee ("GRCC") and by the Risk Committee, before approval by the board.

The group conducts capital planning and stress testing on a regular basis. This process takes into account the perspectives of all key stakeholders, including the board, our shareholders and the regulators.

The ICAAP is a core component of the group's approach to capital and risk management, and it is also widely used across the organisation, supporting analysis and conclusions about the robustness of the group's business model, especially in discussions with external stakeholders, such as rating agencies. The ICAAP's Pillar 2b stress testing scenarios are considered as part of the development of the group's three-year strategic plan and going concern and viability assessments for the financial year end.

(b) Result of the group's internal capital adequacy assessment process (Article 438(c) CRR)

The group ordinarily is subject to the PRA's supervisory review and evaluation process ("SREP") on a regular basis. Following the last SREP, the group was set a total capital requirement of 9.3% of which 5.2% must be met with CET1 capital.

Annex III: Risk management policies and objectives

UK OVA – Risk management approach

(a) Risk statement approved by the management body (Point (f) of Article 435(1) CRR)

Effective management of the risks we face is central to everything we do.

The group faces a number of risks in the normal course of business providing lending, deposit taking, wealth management services and securities trading. To manage these effectively, a consistent approach is adopted based on a set of overarching principles, namely:

- i. adhering to our established and proven business model, as outlined on pages 14 to 15 of the group's Annual Report;
- ii. implementing an integrated risk management approach based on the concept of three lines of defence; and
- iii. setting and operating within clearly defined risk appetites, monitored with defined metrics and limits.

The group employs an Enterprise Risk Management Framework ("ERMF") designed to provide the board and senior management with oversight of the group's financial position as well as the risks that might adversely affect it.

The framework is founded on a three lines of defence model and details the core risk management components and structures used across the firm, and defines a consistent and measurable approach to identifying, assessing, controlling and mitigating, reviewing and monitoring, and reporting risk – the risk process lifecycle. The framework is purposely designed to allow the capture of business opportunities whilst maintaining an appropriate balance of risk and reward within the group's agreed risk appetite.

Risk appetite forms a key component of the group's risk management framework and refers to the sources and levels of risk that the group is willing to assume in order to achieve its strategic objectives and business plan. It is managed via an established framework that facilitates ongoing communication between the board and management with respect to the group's evolving risk profile. This enables key decisions concerning the allocation of group resources to be made on an informed basis.

Risk appetite is set on a top-down basis by the board with consideration to business requests and executive recommendation. Appetite measures, both qualitative and quantitative, are applied to inform decision-making, and monitoring and reporting processes. Early-warning triggers are also employed to drive required corrective action before overall tolerance levels are reached.

The group conducts a formal review of its risk appetites annually to align risk-taking with the achievement of strategic objectives. Adherence is monitored through the group's risk committees on an ongoing basis, with interim updates to individual risk appetites considered as appropriate through the year.

Principal risks relating to Pillar 1 minimum capital requirements

The following table sets out the principal risks in relation to the group's Pillar 1 minimum capital requirements that may impact the group's ability to deliver its strategy, the frameworks in place to mitigate them, and relevant key developments, both over the last year and anticipated for the next financial year. A full list of the principal risks that the group faces can be found on pages 80 to 116 of the group's Annual Report covering business and strategic risk; capital risk; conduct risk; credit risk; funding and liquidity risk; legal and regulatory risk; non-traded market risk; operational risk; reputational risk and traded market risk. Please refer to Annex XIII, liquidity requirements, for further detail on the risk management of the group's liquidity.

Risk	Mitigation
Capital risk	<p>Capital risk is the risk that the group has insufficient regulatory capital (including equity and other loss-absorbing debt instruments) to operate effectively, including meeting minimum regulatory requirements, operating within board-approved risk appetite and supporting its strategic goals.</p> <p>The group's exposure to capital risk principally arises from its requirement to meet minimum regulatory requirements set out in the CRR and from related additional requirements and guidelines specified by the PRA and is usually specified in terms of minimum capital ratios which assess the level of regulatory capital and risk weighted assets. The group operates a prudent business model which results in comparatively low levels of leverage and so risk-based capital requirements are, and are likely to remain, the group's binding constraint.</p> <p>The group's policy is to be well capitalised and its approach to capital management is driven by strategic and organisational requirements, while also taking into account the regulatory and commercial environments in which it operates. Accordingly, a prudent capital position is a core part of the group's business model, allowing it to grow and invest in the business, support paying dividends to shareholders and meet regulatory requirements.</p> <p>Capital risk is measured using CET1, tier 1 and total capital ratios, determined in line with regulatory capital adequacy requirements. These ratios, and associated metrics, are actively monitored, and reported quarterly to the regulator. These are also disclosed in the group's Annual Report as well as in these Pillar 3 disclosures – see Annex I.</p> <p>Both actual and forecast capital adequacy, including the potential impact of capital headwinds, are reported through the group's governance framework with oversight from the Capital Adequacy Committee, the Group Risk and Compliance Committee and the Risk Committee. Annually, as part of the ICAAP, the group also undertakes its own assessment of its capital requirements against its principal risks (Pillar 2a) together with an assessment of how capital adequacy could be impacted in a range of stress scenarios (Pillar 2b). Under both assessments, the group ensures that it maintains sufficient levels of capital adequacy.</p> <p>The group has a range of capital risk mitigants available, including the cancellation of dividends, RWA optimisation activities and efficiency savings which support the strong organic capital-generating capacity of the group. In addition, the group has a strong track record of access to capital markets including the issuance of £200 million Additional Tier 1 capital in November 2023.</p> <p>In January 2024, the FCA announced a review of historical motor finance commission arrangements with next steps now expected by the end of May 2025. There remains significant uncertainty for the industry and the group regarding any potential remedial action as a result of the review. There are a range of possible outcomes and we remain focused on further strengthening the group's capital position, with the priority of protecting and sustaining our valuable franchise.</p> <p>As announced in the Half Year 2024 results, the group is implementing a number of management actions which include selective loan book growth initiatives, potential risk transfer through securitisation, a continued review of business portfolios, capital retention opportunities and identified cost savings, which, combined with the decision not to pay a dividend in the 2024 financial year, have the potential to strengthen the group's available CET1 capital by approximately £400 million by the end of the 2025 financial year.</p> <p>Following a comprehensive strategic review, the group announced that it entered into an agreement to sell CBAM to Oaktree on 19 September 2024. The transaction is expected to increase the group's CET1 capital ratio by approximately 100 basis points on a pro-forma basis.</p>
Credit risk	<p>Credit risk is the risk of a reduction in earnings and/or value, as a result of the failure of a counterparty or associated party, with whom the group has contracted, to meet its obligations as they fall due.</p> <p>As a lender to businesses and individuals, the group is exposed to credit losses if customers are unable to repay loans and outstanding interest and fees.</p> <p>The Banking division's general approach to credit mitigation is based on the provision of affordable lending on a secured or structurally protected basis, against assets that are known and understood. These assets are typically easily realisable with strong secondary markets and predictable values, and spread across a broad range of classes within established sectors.</p> <p>Whilst diverse, the businesses adhere to a set of common lending principles resulting in stable portfolio credit quality and consistently low loss rates through the cycle.</p> <p>The common lending principles are as follows:</p> <ul style="list-style-type: none"> • Predominantly secured lender: 97.6% of loan book secured or structurally protected. • Short average tenor: portfolio residual maturity of 15 months. • Small average loan size with low single-name concentration risk with balance for top 10 facility limits representing less than 6% of loan book. • Further diversification by sector, asset class and UK geography. • Local underwriting expertise with central oversight: focus on assets that are known and understood, with continued investments in people and systems. <p>All lending criteria and assessment procedures are thoroughly documented in robust credit policies and standards, at both a bank and business level.</p> <p>The Banking division applies consistent and prudent lending criteria to mitigate credit risk. To support this approach, the group maintains a credit risk appetite framework to define and align credit risk strategy to its overall appetite for risk and business strategies, as defined by the board.</p>

Risk	Mitigation
<p>Non-traded market risk</p>	<p>Non-traded market risk is the current or prospective risk to the group’s capital or earnings arising from changes in interest rates, credit spreads and foreign exchange rates applied to the group’s non-trading book.</p> <p>The group’s non-traded market risk exposure consists of interest rate risk in the banking book (“IRRBB”), credit spread risk in the banking book (“CSRBB”) and foreign exchange (“FX”) risk.</p> <p>The group has a restricted appetite for interest rate risk which is limited to that required to operate efficiently. The group’s policy is to match repricing characteristics of assets and liabilities naturally. Where this is not possible vanilla interest rate swaps are used to hedge the risk within prescribed limits.</p> <p>The group has a limited appetite for credit spread risk which occurs due to the high-quality liquid assets (“HQLA”) portfolio, which primarily comprises of highly rated UK and European supranational debt, sovereign debt, agency bonds and UK covered bonds.</p> <p>The group has a restricted appetite for foreign exchange risk. It avoids large open positions and sets individual currency limits to mitigate the risk.</p> <p>The group recognises three main sources of IRRBB which could adversely impact future income or the value of the balance sheet:</p> <ul style="list-style-type: none"> • repricing risk: the risk presented by assets and liabilities that reprice at different times; • embedded optionality risk: the risk presented by contract terms embedded into certain assets and liabilities; and • basis risk: the risk presented by a mismatch in the reference interest rate for assets and liabilities. <p>Two measures are used for measuring IRRBB: Earnings at Risk (“EaR”) and Economic Value (“EV”).</p> <p>The group recognises three categories of FX risk:</p> <ol style="list-style-type: none"> 1. transaction risk: the risk relating to foreign currency loan commitments; 2. translation risk: the risk relating to converting foreign currently balances and profits into sterling; 3. structural FX risk: the risk relating to the potential impact on capital ratios relating to non-GBP exposures. <p>Transaction risk is measured daily within treasury based on net cash flows and contracted future exposures. Treasury’s strategy is to hedge the FX risk as soon as it arrives, and to have zero FX transaction exposure each day at close of business.</p> <p>Translation risk is monitored within each business monthly translating non-UK profits regularly to mitigate fluctuations in foreign exchange rates.</p>
<p>Traded market risk</p>	<p>Traded market risk is the risk that a change in the value of an underlying market variable will give rise to an adverse movement in the value of the group’s assets.</p> <p>Traded market risk in the group only arises in Winterflood, whose core business is to provide liquidity and interact with the market on a principal basis, holding positions in financial instruments as a result of its client facilitation activity.</p> <p>Winterflood is a market maker providing liquidity to its clients in equity and fixed income instruments. Building on the use of real-time limit monitoring, the monitoring of traded market risk is embedded across all three lines of defence. Top-down visibility is exercised via the Winterflood Risk and Compliance Committee, which retains regular oversight of core traded market risk management information and key risk indicators, as well as stress testing outputs and policies and standards. The management of traded market risk is fully embedded within Winterflood’s training and governance framework.</p>

Risk	Mitigation
<p>Operational risk</p>	<p>Operational risk is the risk of loss or customer harm resulting from inadequate or failed processes, people and systems or external events. This includes the risk of being unable to recover systems quickly and maintain critical services.</p> <p>The group is exposed to various operational risks through its day-to-day business activities, many of which have the potential to result in direct or indirect financial loss or adverse impact to the group's financial performance, levels of customer care or reputation.</p> <p>Operational risk is a core component of the Enterprise Risk Management Framework ("ERMF") and is embedded in day-to-day business activities. Requirements and responsibilities are set out in the Operational Risk Policy and supporting standards and procedures as part of the framework to identify, assess, mitigate, monitor and report the operational risks, events and issues that could impact the achievement of the business objectives or impact core business processes.</p> <p>Operational risk is measured through key risk indicators ("KRIs"), observed impact of risk events, periodic risk and control self-assessments and scenario analysis. Material operational risk events are identified, reviewed and escalated in line with set criteria set out in the ERM Fand a supporting suite of standards and policies and use of common systems.</p> <p>The group seeks to deliver its strategic objectives and maintain operational resilience and accepts a level of loss may arise from operational failure. Key to this is continued management of operational risks and key controls, monitoring and governance, with appropriate escalation and oversight to manage operational risks and losses within acceptable limits. We operate controls over the group's most significant operational risks ensuring there are near-term mitigation strategies where risks are greatest and ensure these are sufficient to prevent material disruption of our service to customers and/or our businesses.</p> <p>The board delegates authority to the GRCC to manage the group's operational risk framework on a day-to-day basis and provide oversight of its exposure. The committee is supported by the Operations and Technology Risk Committee which is responsible for oversight of technology, information security, third-party and certain other resilience-related risks. Regular management information is presented to and discussed by these committees and additionally local business RCCs.</p> <p>The Risk function has a dedicated operational risk team which is responsible for maintaining the framework, tool sets and reporting necessary for effective operational risk management. The group has identified, assessed and monitored all key operational and resilience risks, including undertaking a bi-annual assessment of control effectiveness, monitoring key risk indicator trends and escalating events, in accordance with policy and standard requirements. In the second line, operational risk managers are aligned to businesses, with an additional technical second line of defence team providing specialist oversight of technology, information security, data, resilience and third-party risks. Monitoring of all operational risk domains is conducted via divisional RCCs with escalation to the GRCC and Risk Committee as appropriate.</p> <p>The delivery of a standardised framework and management information across all operating risks is complemented by periodic thematic reviews conducted on key focus areas and reviewed by the GRCC and Risk Committee. In the last year these have covered change execution including technology services material outsourcing, third party risk, fee remediation and fraud. Further independent assurance is obtained through reviews conducted by the compliance monitoring team and specialist external partners (e.g. cyber risk management) and group internal audit.</p> <p>Additionally, the group has an embedded Whistleblowing Policy which sets out the high-level framework for meeting regulatory requirements in relation to the handling of reportable concerns by whistleblowers. The policy and supporting standard sets of the process to raising aspects of concerns by all employees, past and current, across the group.</p> <p>Furthermore, the Risk function performs a level of oversight of the group's business planning process, including analysis of industry trends or forward-looking threats that could lead to material impact on our ability to deliver on the strategic objectives or result in a significant impact on assessment of operational risk capital.</p>

(b) Information on the risk governance structure for each type of risk (Point (b) of Article 435(1) CRR)

The board retains overall responsibility for overseeing the maintenance of a system of internal control, to ensure that an effective risk management framework and oversight process operate across the group. The risk management framework and associated governance arrangements are designed to ensure a clear organisational structure with distinct, transparent and consistent lines of responsibility and effective processes to identify, manage, monitor and report the risks to which the group is, or may become, exposed. On an annual basis, the board reviews the effectiveness of the group's risk management and internal control systems.

Risk management across the group is overseen by the Risk Committee. The committee is responsible for reviewing risk appetite, monitoring the group's risk profile against this and reviewing the day-to-day effectiveness of the risk management framework. In addition, the committee is responsible for overseeing the maintenance and development of an appropriate and supportive risk culture and for providing risk input into the alignment of remuneration with performance against risk appetite.

The committee's key areas of focus over the last financial year are set out on pages 147 and 149 of the group's Annual Report.

The group closely monitors its risk profile to ensure that it continues to align with its strategic objectives as documented on page 20 of the group's Annual Report. The board considers that the group's current risk profile remains consistent with its strategic objectives.

Risk Governance

The group's risk management approach is underpinned by a strong governance framework founded on a three lines of defence model. The governance framework is considered appropriate to both the size and strategic intentions of the group. The key principles underlying this approach are that:

- business management owns all the risks assumed throughout the group and is responsible for their day-to-day management to ensure that risk and return are balanced;
- the board and business management together promote a culture in which risks are identified, assessed and reported in an open, transparent and objective manner;
- the overriding priority is to protect the group's long-term viability and produce sustainable medium to long-term revenue streams;
- risk functions are independent of the businesses and provide oversight of and advice on the management of risk across the group;
- risk management activities across the group are proportionate to the scale and complexity of the group's individual businesses;
- risk mitigation and control activities are commensurate with the degree of risk; and
- risk management and control supports decision-making.

First line of defence	Second line of defence	Third line of defence
<p>The Businesses</p> <p>Group Risk and Compliance Committee (reports to the Risk Committee)</p> <p>The chief executive delegates to divisional and operating business chief executives the day-to-day responsibility for risk management, regulatory compliance, internal control and conduct in running their divisions or businesses.</p> <p>Business management has day-to-day ownership, responsibility and accountability for:</p> <ul style="list-style-type: none"> • identifying and assessing risks; • managing and controlling risks; • measuring risk (key risk indicators/ early warning indicators); • mitigating risks, including controls framework and effectiveness; • reporting risks; and • committee structure and reporting; and • management of self-assessment of operational resilience capabilities. <p>Key Features</p> <ul style="list-style-type: none"> • Promotes a strong risk culture and focus on sustainable risk-adjusted returns. • Implements the risk framework. • Promotes a culture of adhering to limits and managing risk exposures and ongoing self-assessment. • Promotes a culture of focus on good customer outcomes. • Promotes responsibility for ongoing monitoring of positions and management and control of risks and controls effectiveness, including testing, alongside portfolio optimisation. 	<p>Risk and Compliance</p> <p>Risk Committee (reports to the board)</p> <p>The Risk Committee delegates day-to-day responsibility for oversight and challenge on risk-related issues to the group chief risk officer.</p> <p>Risk functions (including compliance) provide support, assurance and independent challenge on:</p> <ul style="list-style-type: none"> • the design and operation of the risk framework and methodologies; • risk assessment; • risk appetite and strategy; • performance management; • risk reporting; • adequacy of mitigation plans and effectiveness of risk decisions taken by business management; • group risk profile; and • committee governance and challenge. <p>Key Features</p> <ul style="list-style-type: none"> • Oversees embedding of the risk framework and supporting methodologies, taking an integrated view of risk and compliance (qualitative and quantitative). • Promotes a strong and effective risk and control culture across the group. • Undertakes compliance monitoring and assurance activities. • Supports through developing and advising on risk and compliance strategies. • Facilitates constructive check and challenge. • Oversight of business conduct and customer outcomes. 	<p>Internal Audit</p> <p>Audit Committee (reports to the board)</p> <p>The Audit Committee mandates the head of group internal audit with day-to-day responsibility for independent assurance.</p> <p>Internal audit provides independent assurance on:</p> <ul style="list-style-type: none"> • first and second lines of defence; • appropriateness/effectiveness of internal controls; and • effectiveness of policy implementation. <p>Key Features</p> <ul style="list-style-type: none"> • Draws on deep knowledge of the group and its businesses. • Provides independent assurance on the activities of the group, including the risk management framework. • Assesses the appropriateness and effectiveness of internal controls. • Incorporates review of culture and conduct, and customer outcomes.

Aligned to these core principles, the governance framework operates through various delegations of authority from the board downwards. These cover both individual authorities as well as authorities exercised via the group's risk committee structure.

Risk committee structure

Risk Committee Structure	
Group Risk and Compliance Committee	Provides oversight of the group's risk profile, alignment to risk appetite and effectiveness of the risk management and compliance framework.
Model Governance Committee	Provides oversight of the group's exposure to model risk through the review, approval and monitoring of all high materiality models.
Capital Adequacy Committee	Monitors group and bank capital adequacy, incorporating capital planning, stress testing, governance, processes and controls.
Bank Asset and Liability Committee	Provides oversight of the Banking division's risk management and internal controls and its subsidiaries across liquidity, funding and market risk.
Group Asset and Liability Committee	Provides oversight of the company and wider group's risk management and internal controls across liquidity, funding and market risk.
Credit Risk Management Committee	Monitors the group's credit risk profile, examining current performance and key portfolio trends, ensuring compliance with risk appetite.
Group Credit Committee	Reviews material credit transactions and exposures from a credit, reputational, funding structure and business risk perspective.
Impairment Adequacy Committee	Governs the Banking division's impairment process, reviewing the financial position relating to impairment and ensuring adequate coverage is held across the portfolio.
Operations and Technology Risk Committee	Monitors and oversees group-wide operational resilience, including technology, security, supplier and operational risk appetite, examining industry, regulatory and technical risks.
Divisional Risk and Compliance Committees	Provide oversight of risk profile, alignment to risk appetite and effectiveness of the risk management and compliance framework at a divisional or business level.

Together, these committees facilitate an effective flow of key risk information, as well as functioning to support appropriate risk management at each stage of the risk process lifecycle. They also provide an escalation channel for any risks or concerns, supporting the maintenance of an effective risk culture. During the year the effectiveness of these committees was reviewed to ensure they remain fit for purpose and all committees continue to work efficiently and effectively.

Over the past 12 months further enhancements have been made to the risk reporting packs and management information to support strengthened risk evaluation and management.

Risk Committee Roles and Responsibilities

The Risk Committee's key responsibilities are to:

- oversee the maintenance and development of a supportive culture and "tone from the top" in relation to the management of risk;
- review and recommend to the board for approval the group's risk appetite, which is the level of risk the group is willing to take in pursuit of its strategic objectives;
- monitor the group's risk profile against the prescribed appetite;
- review the effectiveness of the risk management framework to ensure that key risks are identified and appropriately managed;
- provide input from a risk perspective into the alignment of remuneration with performance against risk appetite (through the Remuneration Committee); and
- undertake a robust assessment of both the principal and emerging risks facing the group over the course of the year, and review reports from the risk and compliance functions on the effectiveness of the processes that support the management and mitigation of those risks.

(c) Declaration approved by the management body on the adequacy of the risk management arrangements (Point (e) of Article 435(1) CRR)

As described in more detail on page 134 of the group's Annual Report, an evaluation of the effectiveness of the board and its committees was undertaken during the year in line with the requirements of the UK Corporate Governance Code. The board has reviewed the group's risk management and internal control systems and considers that the group has in place adequate systems and controls with regard to its risk profile and strategy. The board's assessment is supported by the work of the Risk Committee and Audit Committee which together keep under review the effectiveness of the systems of risk management and internal control via a range of mechanisms. This includes regular risk management metrics, review and challenge of internal audit activities, and review and challenge of various risk-related processes and plans.

(d) Disclosure on the scope and nature of risk disclosure and/or measurement systems (Point (c) of Article 435(1) CRR)

The statement set out above in UK OVA (c) is reviewed and approved by the Risk Committee, in accordance with the committee's terms of reference. Alongside this, an annual assessment of the effectiveness of the ERMF is performance and recommendations presented to both the Group Risk and Compliance Committee and the Risk Committee.

(e) Disclose information on the main features of risk disclosure and measurement systems (Point (c) of Article 435(1) CRR)

The board, assisted by the Risk Committee and the Audit Committee, monitors the group's risk management and internal control systems and reviews their effectiveness throughout the year. The assessment is informed through various sources of information, both internal and external and may include but is not limited to:

- Outputs from the previous year assessment and progress in completing any recommendations / actions identified;
- Benchmarking against peers;
- Insights into the appropriateness and effectiveness of internal controls through reviews performed by internal audit;
- Management information and reports from the risk and compliance functions.

(f) Strategies and processes to manage risks for each separate category of risk (Point (a) of Article 435(1) CRR)

The ERMF details the core risk management components and structures used across the firm. The framework sets out the activities, tools, techniques and organisational arrangements that ensure all principal risks facing the group are identified and understood; and that appropriate responses are in place to protect the group and prevent detriment to its customers and colleagues. This enables the group to meet its goals and enhances its ability to respond to new opportunities. For more information on the ERMF see the Risk Report on pages 74 to 116 in the group's Annual Report.

Risk Culture and Awareness

Maintenance of an effective risk management culture is integral to the group meeting its regulatory conduct requirements and assisting the accomplishment of key strategic goals.

The risk culture:

- supports the group and its directors to meet their legal and regulatory obligations, particularly with respect to the identification and management of risks and the need for a robust control environment;
- underpins the group's purpose, strategy, cultural attributes and divisional values;
- provides enhanced awareness of risk in business operations by highlighting strengths and weaknesses and their materiality to the business and, in turn, facilitating informed decision-making;
- optimises business performance by facilitating challenge of ineffective controls and improving the allocation of resources;
- improves the group's control environment; and
- assists in the planning and prioritisation of key projects and initiatives.

While risk management is led centrally, it is embedded locally within our businesses. Managers actively promote a culture in which risks are identified, assessed, managed and reported in an open, transparent and objective manner, and staff conduct is viewed as critical.

All members of staff are responsible for risk identification and reporting within their area of responsibility and are encouraged to escalate risks and concerns where necessary, either through line or business management or by following the provisions of the group Whistleblowing Policy.

The group risk management function operates independently of the business, providing oversight and advice on the operation of the risk framework, and assurance that agreed processes operate effectively and that a risk and conduct culture is embedded within the business.

The relationship between risk and reward is also a key priority with all staff evaluated against both agreed objectives (the what) and desired behaviours (the how). This encourages long-term, stewardship behaviours together with a strong and appropriate risk and conduct culture.

For further information on our approach to remuneration for the group's directors see pages 150 to 175 of the group's Annual Report.

Stress Testing

Stress testing represents another core component of the risk management framework and is employed, alongside scenario analysis, to support assessment and understanding of the risks to which the group might be exposed in the future. As such, it provides valuable insight to the board and senior management, playing an important role in the formulation and pursuit of the group's strategic objectives.

Internal Control System

Aligned to the risk governance framework, oversight across the group is supported by the maintenance of a range of internal controls. These cover risk and financial management and reporting and control processes. The controls are designed to ensure the accuracy and reliability of the group's financial information and reporting.

The main features of these controls include consistently applied accounting policies, clearly defined lines of responsibility and processes for the review and oversight of disclosures within the Annual Report. These controls are overseen by the Audit Committee.

The policy framework, overseen by the board, is a key component of the group's ERMF, supporting the foundation of a strong risk management structure. Group policies are supported by group standards, and by divisional/business-level policies and procedures which, together, outline the way in which policy is implemented and detail the process controls in place to ensure compliance. The accounting policies form part of this broader policy framework, alongside policies and standards relating to the group's principal risks.

This structure establishes a link between group strategy and day-to-day operations in a manner consistent with agreed risk appetite. Simultaneously they facilitate board and executive-level oversight and assurance as to the application of said strategy via conformance with underlying policy and standard requirements.

(g) Information on the strategies and processes to manage, hedge and mitigate risks (Point (a) and (d) of Article 435(1) CRR)

The group employs an ERMF designed to provide the board and senior management with oversight of the group's financial position as well as the risks that might adversely affect it.

The framework details the core risk management components and structures used across the group, and defines a consistent and measurable approach to identifying, assessing, controlling and mitigating, reviewing and monitoring, and reporting risk – the risk process lifecycle. This sets out the activities, tools, techniques and organisational arrangements designed to identify the principal and emerging risks facing the group; and that appropriate responses are in place to mitigate these risks and prevent detriment to its customers and colleagues. This is an enabler for the group to meet its goals and enhance its ability to respond to new opportunities.

The group's suite of principal risks is accompanied by a portfolio of emerging risks reflecting broader market uncertainties. The group defines an emerging risk as a risk that may potentially become material in the delivery of the group's strategic objectives but the risk and its applicability to the group may not yet be fully understood or assessed. This incorporates input and insight from both a top-down and bottom-up perspective.

A full list of emerging risks and uncertainties that the group faces can be found on page 84 of the group's Annual Report covering economic uncertainty; geopolitical uncertainty; medium-term transitional climate risks, strategic disruption and change execution risk.

The group's activities, business model and strategy remain unchanged; as a result, following review and challenge, it has been determined that at present, the principal risks themselves remain broadly consistent with those detailed in prior years, although the underlying risk drivers may have changed, our approach to mitigating these has evolved in step with them. Climate risk remains a cross-cutting risk that could impact across all principal risks.

For more information on principal risks, and the frameworks in place to mitigate them, see the table in UK OVA (a) above.

UK OVB – Governance arrangements

(a) The number of directorships held by members of the management body (Point (a) of Article 435(2) CRR)

In addition to their roles within the group, the number of external directorships¹ held by members of the management body are detailed in the table below. Further details on the board of directors can be found on page 124 of the group's Annual Report.

Name	Position	Directorships
Mike Biggs	Chairman	0
Adrian Sainsbury	Chief Executive	0
Mike Morgan	Chief Finance Director	0
Mark Pain	Senior Independent Director	2
Tesula Mohindra	Independent Non-executive Director	2
Patricia Halliday	Independent Non-executive Director	0
Sally Williams	Independent Non-executive Director	2
Tracey Graham	Independent Non-executive Director	2
Kari Hale	Independent Non-executive Director	1

¹ The number of directorships shown excludes external non-commercial directorships. External directorships held within the same group of companies count as a single directorship.

(b) Information regarding the recruitment policy for the selection of members of the management body (Point (b) of Article 435(2) CRR) and (c) Information on the diversity policy with regard of the members of the management body (Point (c) of Article 435(2) CRR)

The board acknowledges the benefits that diversity and inclusion can bring to the board and to all levels of the group's operations. As such, the board is committed to the promotion of diversity and inclusion across the group and to ensuring that all employees are treated fairly.

The board maintains a board diversity and inclusion policy, which is reviewed annually by the Nomination and Governance Committee. The policy recognises the importance of ensuring its members collectively possess the appropriate range and balance of skills, knowledge and expertise, and embrace the advantages to be derived from having a diversity of gender, social and ethnic backgrounds represented by the Board, bringing different perspectives and the challenge needed to ensure effective decision-making.

More information on the recruitment and diversity policies and practices for the selection of members of the management body can be found in the Nomination and Governance Committee Report on pages 139 and 142 of the group's Annual Report.

(d) Information whether or not the group has set up a separate risk committee and the frequency of the meetings (Point (d) of Article 435(2) CRR)

The Risk Committee comprises all CBG independent non-executive directors and Patricia Halliday as chair.

Six scheduled meetings were held during the year. Full details of attendance by the non-executive directors at scheduled meetings are set out on page 132 of the group's Annual Report.

Members of the Risk Committee are regularly joined by the chairman of the board, the executive directors, the group chief risk officer, the group head of compliance and the group head of internal audit, all of whom receive standing invitations to attend.

Other executives, subject matter experts, risk team members and external advisers are invited to attend the Committee from time to time as required, to present and advise on reports commissioned.

The Risk Committee's chair continues to meet frequently with the group chief risk officer and his risk team in a combination of formal and informal sessions, and with senior management across all divisions of the group, to discuss the business environment and to gather their views on emerging risks, business performance and the competitive environment.

(e) Description on the information flow on risk to the management body (Point (e) of Article 435(2) CRR)

The governance framework operates through various delegations of authority from the board downwards, including authorities exercised via the aforementioned risk committee structure.

Together, these committees facilitate an effective flow of key risk information, as well as functioning to support appropriate risk management at each stage of the risk process lifecycle. They also provide an escalation channel for any risks or concerns, supporting the maintenance of an effective risk culture.

Annex V: Scope of application

UK LIA – Explanations of differences between accounting and regulatory exposure amounts

(a) Differences between columns (a) and (b) in template UK LI1 (Article 436(b) CRR)

There are no differences in the carrying values for columns (a) and (b) and there are no entities derecognised from the accounting balance sheet for regulatory purposes.

(b) Information on the main sources of differences between the accounting and regulatory scope of consolidation shown in template UK LI2 (Article 436(d) CRR)

Exposure amounts considered for regulatory purposes as a starting point for risk-weighted asset calculations shown in template UK LI2 differ to the carrying values under the regulatory scope of consolidation for the following reasons:

- As shown in row 9 of UK LI2, off-balance sheet amounts are reduced by applicable credit conversion factors; and
- As shown in row 11, other differences are primarily driven by add-ons in relation to potential future credit exposure for derivative financial instruments (CCR framework) and transitional arrangements in relation to IFRS 9 (credit risk framework).

UK LIB – Other qualitative information on the scope of application

(a) Impediment to the prompt transfer of own funds or to the repayment of liabilities within the group (Article 436(f) CRR)

Other than restrictions due to regulatory capital requirements for regulated subsidiaries including Winterflood, CBAM and CBL, there are no impediments that impact on the ability of subsidiary undertakings to transfer funds or repay liabilities promptly or the ability to transfer capital by way of a dividend payment.

(b) Subsidiaries not included in the consolidation with own funds less than required (Article 436(g) CRR)

There are no subsidiaries excluded from the consolidation.

(c) Use of derogation referred to in Article 7 CRR or individual consolidation method laid down in Article 9 CRR (Article 436(h) CRR)

CBL makes use of the provisions laid down in CRR article 9 and reports to the PRA on an individual consolidated basis. Entities included in the individual consolidation at 31 July 2024 are:

- Close Finance (CI) Ltd;
- Close Brothers Technology Services Ltd;
- Commercial Acceptances Ltd;
- Close Leasing Ltd;
- Close Invoice Financial Ltd;
- Close Brewery Rentals Ltd;
- Close Brothers Vehicle Hire Ltd;
- Novitas Loans Ltd;
- Close Brothers Premium DAC;
- Corporate Asset Solutions Ltd; and
- Close Brothers DAC.

(d) Aggregate amount by which the actual own funds are less than required in all subsidiaries that are not included in the consolidation (Article 436(g) CRR)

There are no subsidiaries excluded from the consolidation.

UK LI1 – Differences between accounting and regulatory scopes of consolidation and mapping of financial statement categories with regulatory risk categories¹

£m		a	b	c	d	e	f	g
		Carrying values as reported in published financial statements	Carrying values under scope of regulatory consolidation	Carrying values of items				
				Subject to the credit risk framework	Subject to the CCR framework	Subject to the securitisation framework	Subject to the market risk framework	Not subject to own funds requirements or subject to deduction from own funds
Breakdown by asset class according to the balance sheet in the published financial statements								
1	Cash and balances at central banks	1,584.0	1,584.0	1,584.0	—	—	—	—
2	Settlement balances	627.5	627.5	—	0.3	—	627.2	—
3	Loans and advances to banks	293.7	293.7	293.7	—	—	—	—
4	Loans and advances to customers	9,830.8	9,830.8	9,830.8	—	—	—	—

12	Deferred tax assets ²	14.3	14.3	16.6	—	—	—	(2.3)
13	Prepayments, accrued income and other assets	186.7	186.7	185.9	—	—	—	0.8
14	Total assets	14,080.8	14,080.8	13,016.4	124.2	6.7	669.0	264.5
Breakdown by liability classes according to the balance sheet in the published financial statements								
1	Settlement balances and short positions	614.9	614.9	—	—	—	614.9	—
2	Deposits by banks	138.4	138.4	—	—	—	—	138.4
3	Deposits by customers	8,693.6	8,693.6	—	—	—	—	8,693.6
4	Loans and overdrafts from banks	165.6	165.6	—	—	—	—	165.6
5	Debt securities in issue	1,986.4	1,986.4	—	—	—	—	1,986.4
6	Loans from money brokers against stock advanced	16.7	16.7	—	—	—	—	16.7
7	Derivative financial instruments	129.0	129.0	—	129.0	—	—	—
8	Current tax liabilities	—	—	—	—	—	—	—
9	Accruals, deferred income and other liabilities	306.5	306.5	—	—	—	—	306.5
10	Subordinated loan capital	187.2	187.2	—	—	—	—	187.2
11	Total liabilities	12,238.3	12,238.3	—	129.0	—	614.9	11,494.4

¹ As explained in UK LIA, there are no differences between the accounting and regulatory scopes of consolidation.

² Accounting value for deferred tax assets is net of deferred tax liabilities in row 12, column a and b. £16.6m of deferred tax assets are subject to the credit risk framework with £(2.3)m of deferred tax liabilities net against associated intangible assets and pension assets that are subject to regulatory capital deductions from own funds and therefore shown in column g.

UK LI2 – Main sources of differences between regulatory exposure amounts and carrying values in financial statements¹

£m		a	b	c	d	e
		Total	Items subject to			
			Credit risk framework	Securitisation framework	CCR framework	Market risk framework
1	Assets carrying value amount under the scope of regulatory consolidation (as per UK LI1)	13,816.3	13,016.4	6.7	124.2	669.0
2	Liabilities carrying value amount under the regulatory scope of consolidation (as per UK LI1)	(743.9)	—	—	(129.0)	(614.9)
3	Total net amount under the regulatory scope of consolidation	13,072.4	13,016.4	6.7	(4.8)	54.1
4	Off-balance-sheet amounts	1,053.3	1,053.3	—	—	
5	Differences in valuations	—	—	—	—	
6	Differences due to different netting rules, other than those already included in row 2	—	—	—	—	
7	Differences due to consideration of provisions	—	—	—	—	
8	Differences due to the use of credit risk mitigation techniques (CRMs)	—	—	—	—	
9	Differences due to credit conversion factors	(944.5)	(944.5)	—	—	
10	Differences due to Securitisation with risk transfer	—	—	—	—	
11	Other differences	63.3	12.2	—	51.1	
12	Exposure amounts considered for regulatory purposes	13,244.5	13,137.4	6.7	46.3	54.1

¹ Differences are explained in UK LIA.

UK LI3 – Outline of the differences in the scopes of consolidation – entity by entity

There are no differences in the methods of accounting and regulatory consolidation as all entities within the group are fully consolidated and so this template has not been presented. A list of the group's subsidiaries at 31 July 2024, which are all wholly owned and incorporated, can be found in note 28 of the group's Annual Report. For more information on the differences between accounting and regulatory exposure amounts, see UK LIA.

UK PV1 – Prudent valuation adjustments

The group applies the simplified approach to calculate the prudent valuation adjustment ("PVA") and therefore template PV1 has not been presented as it is only applicable to institutions applying the core approach. Under the simplified approach the PVA is calculated as 0.1% of the sum of the absolute value of fair-valued assets and liabilities.

In accordance with article 436(e) of the CRR the group's PVA is presented below.

	Fair value	Held for hedging	Fair value for PVA
Assets			
Loans and advances to customers held at FVTPL	11.8		11.8
Debt securities:			
Sovereign and central bank debt	383.7		383.7
Supranational, sub-sovereigns and agency bonds	145.5		145.5
Covered bonds	187.7		187.7
Long trading positions in debt securities	16.0		16.0
Equity shares	27.4		27.4
Derivative financial instruments	101.4	(83.6)	17.8
Contingent consideration	1.2		1.2
Other assets	0.8		0.8
Liabilities			
Short positions:			
Debt securities	5.5		5.5
Equity shares	9.3		9.3
Derivative financial instruments	129.0	(116.9)	12.1
Contingent consideration	3.0		3.0
Total fair value assets and liabilities	1,022.3	(200.5)	821.8
Prudent valuation adjustment (0.1% of total)			0.8

Annex VII: Own funds

Regulatory capital

The table below summarises the composition of regulatory capital and shows a reconciliation between shareholders' equity and CET1 capital after adjustments.

£m	a		b	
	31 Jul 2024		31 Jul 2023	
Capital				
1	Shareholders' equity per balance sheet		1,842.5	1,644.9
Regulatory adjustments to CET1 capital				
2	Contingent convertible securities recognised as AT1 capital ¹		(197.6)	—
3	Intangible assets, net of associated deferred tax liabilities		(264.0)	(262.8)
4	Foreseeable dividend ²		(3.8)	(67.0)
5	Cash flow hedging reserve		(13.0)	(34.4)
6	Pension asset, net of associated deferred tax liabilities		(0.6)	(1.0)
7	Prudent valuation adjustment		(0.8)	(0.4)
8	Insufficient coverage for non-performing exposures ³		—	(0.4)
9	IFRS 9 transitional arrangements ⁴		12.1	31.9
10	CET1 capital⁵		1,374.8	1,310.8
11	AT1 capital		200.0	—
12	Total tier 1 capital⁵		1,574.8	1,310.8
13	Tier 2 capital – subordinated debt		200.0	200.0
14	Total regulatory capital⁵		1,774.8	1,510.8
RWAs (notional)				
15	Credit and counterparty credit risk		9,548.4	8,655.4
16	Operational risk		1,044.5	1,084.0
17	Market risk		108.3	108.2
18	Total RWAs		10,701.2	9,847.6
19	CET1 capital ratio⁵		12.8	13.3
20	Tier 1 capital ratio⁵		14.7	13.3
21	Total capital ratio⁵		16.6	15.3

- 1 The contingent convertible securities are classified as an equity instrument for accounting but treated as AT1 for regulatory capital purposes, note 20 of the group's Annual Report.
- 2 Under the CRR Article 26, a deduction for foreseeable dividends and charges has been recognised at 31 July 2024 and 31 July 2023. The deduction at 31 July 2024 reflects charges for the coupon on the group's contingent convertible securities.
- 3 In line with amendment to Own Funds Part of the PRA Rulebook confirmed in PS 14/23, CET1 capital no longer includes a regulatory deduction for insufficient coverage for non-performing exposures (31 July 2023: £0.4 million).
- 4 The group has elected to apply IFRS 9 transitional arrangements for 31 July 2024, which allow the capital impact of expected credit losses to be phased in over the transitional period.
- 5 Shown after applying IFRS 9 transitional arrangements and CRR transitional and qualifying own funds arrangements in force at the time. See template 'IFRS 9 transitional arrangements disclosure' in Annex I for the impact on the capital ratios without their application.

Movement in CET1 capital

The following table shows the movement in CET1 capital during the year.

£m	a		b	
	2024		2023	
1	CET1 capital at 1 August		1,310.8	1,396.7
2	Profit in the period attributable to shareholders		100.4	81.1
3	Dividends paid and foreseen		(15.0)	(100.5)
4	IFRS 9 transitional arrangements		(19.7)	(51.1)
5	Increase in intangible assets, net of associated deferred tax liabilities		(1.2)	(12.1)
6	Other movements in reserves recognised for CET1 capital		(0.8)	(7.3)
7	Other movements in adjustments to CET1 capital		0.3	4.0
8	CET1 capital at 31 July		1,374.8	1,310.8

UK CC1 – Composition of regulatory own funds⁸

The table below shows the composition of the group's regulatory capital position at 31 July 2024 in the disclosure format required by the CRR. References identify balance sheet components within UK CC2 that are used in the calculation of regulatory capital. Certain rows of this table have not been presented as they are not applicable to the group.

		a	b
		Amounts	Reference to UK CC2
<i>£m</i>			
Common Equity Tier 1 (CET1) capital: instruments and reserves			
1	Capital instruments and the related share premium accounts	38.0	(d)
	of which: called up share capital	38.0	(d)
2	Retained earnings	1,630.6	(e) ¹
3	Accumulated other comprehensive income (and other reserves)	11.4	(f) ²
6	Common Equity Tier 1 (CET1) capital before regulatory adjustments	1,680.0	
Common Equity Tier 1 (CET1) capital: regulatory adjustments			
7	Additional value adjustments (negative amount)	(0.8)	
8	Intangible assets (net of related tax liability) (negative amount)	(264.0)	(a) ³
11	Fair value reserves related to gains or losses on cash flow hedges of financial instruments that are not valued at fair value	(13.0)	
15	Defined-benefit pension fund assets (negative amount)	(0.6)	(b) ⁴
16	Direct, indirect and synthetic holdings by an institution of own CET1 instruments (negative amount)	(38.9)	(g) ⁵
27a	Other regulatory adjustments to CET1 capital (including IFRS 9 transitional adjustments)	12.1	
28	Total regulatory adjustments to Common Equity Tier 1 (CET1)	(305.2)	
29	Common Equity Tier 1 (CET1) capital⁹	1,374.8	
Additional Tier 1 (AT1) capital: instruments			
30	Capital instruments and the related share premium accounts	200.0	(h) ⁶
31	of which: classified as equity under applicable accounting standards	200.0	
36	Additional Tier 1 (AT1) capital before regulatory adjustments	200.0	
44	Additional Tier 1 (AT1) capital⁹	200.0	
45	Tier 1 capital (T1 = CET1 + AT1)⁹	1,574.8	
Tier 2 (T2) capital: instruments			
46	Capital instruments and the related share premium accounts	200.0	(c) ⁷
51	Tier 2 (T2) capital before regulatory adjustments	200.0	
58	Tier 2 (T2) capital⁹	200.0	
59	Total capital (TC = T1 + T2)⁹	1,774.8	
Total risk exposure amount			
60	Total risk exposure amount⁹	10,701.2	
Capital ratios and buffers⁸			
61	Common Equity Tier 1 (as a percentage of total risk exposure amount)	12.8	
62	Tier 1 (as a percentage of total risk exposure amount)	14.7	
63	Total capital (as a percentage of total risk exposure amount)	16.6	
64	Institution CET1 overall capital requirement (CET1 requirement in accordance with Article 92 (1) CRR, plus additional CET1 requirement which the institution is required to hold in accordance with point (a) of Article 104(1) CRD, plus combined buffer requirement in accordance with Article 128(6) CRD) expressed as a percentage of risk exposure amount)	9.7	
65	of which: capital conservation buffer requirement	2.5	
66	of which: countercyclical buffer requirement	1.9	
68	CET1 available to meet buffers (as a percentage of risk exposure amount)	7.3	
Amounts below the thresholds for deduction (before risk weighting)			
75	Deferred tax assets arising from temporary differences (amount below 17.65% threshold, net of related tax liability where the conditions in Article 38 (3) CRR are met)	16.6	
Applicable caps on the inclusion of provisions in Tier 2			
77	Cap on inclusion of credit risk adjustments in T2 under standardised approach	117.9	

1 Comprises brought-forward retained earnings, year-to-date profits net of tax and dividends and charges paid and foreseen.

2 Comprises cash flow hedge reserve, share-based awards reserve, exchange movements reserve as well as other profit and loss items in other reserves.

3 Equal to the intangible assets on the balance sheet net of associated deferred tax liabilities.

4 Equal to the defined-benefit pension asset on the balance sheet net of associated deferred tax liabilities.

5 Comprises the treasury share reserve.

6 Includes the nominal amount of contingent convertible securities eligible as additional tier 1 capital. Balance sheet value in UK CC2 is nominal amount net of transaction costs. See UK CCA for further details on the issued AT1 capital.

7 Includes the nominal amount of subordinated notes eligible as tier 2 capital. Balance sheet value in UK CC2 is nominal amount net of transaction costs, fair value adjustment for hedge accounting and includes accrued interest. See UK CCA for further details on the issued tier 2 capital.

8 Certain rows of this table have not been presented as they are not applicable in the UK or are not applicable to the group.

9 For more information on the movements in CET1, tier 1 capital, tier 2 capital, RWAs and capital ratios, see 'Regulatory capital' and 'Movement in CET1 capital' templates in this Annex.

Annex IX: Countercyclical capital buffers

The CCyB is intended to protect the banking sector against losses that could be caused by cyclical systemic risks. In each jurisdiction the relevant authority (the Bank of England in the UK) sets an individual CCyB rate based on their assessment of systemic risks in that jurisdiction. Accordingly, each institution calculates its specific CCyB based on a weighted average of the CCyB rates for each jurisdiction in which it has an exposure. During the 2024 financial year, the CCyB rate for Ireland increased to 1.5%, this did not materially impact the group's weighted countercyclical buffer rate which remained at 1.9% at 31 July 2024 (31 July 2023: 1.9%).

UK CCyB1 – Geographical distribution of credit exposures relevant for the calculation of the countercyclical buffer

The table below shows the geographical distribution of credit exposures relevant for the calculation of the CCyB at 31 July 2024:

	a	b	c		e	f	g	h	i	j	k	l	m	
			Relevant credit exposures – Market risk											Total exposure value
£m	General credit exposures	Exposure value under the IRB approach	Exposure value under the standardised approach	Sum of long and short positions of trading book exposures for SA	Value of trading book exposures for internal models	Securitisation exposures	Relevant credit risk exposures - Credit risk	Relevant credit exposures – Market risk	Relevant credit exposures – Securitisation positions in the non-trading book	Total				
010	Breakdown by country:													
	United Kingdom	9,708.4	—	18.5	—	—	9,726.9	706.0	1.5	—	707.5	8,843.8	93.87	2.00
	Ireland	420.5	—	0.1	—	6.7	427.3	24.0	—	6.7	30.7	383.4	4.07	1.50
	Jersey	83.9	—	—	—	—	83.9	6.4	—	—	6.4	79.5	0.84	0.00
	Other countries ¹	119.2	—	0.4	—	—	119.6	9.1	—	—	9.1	114.2	1.22	
020	Total	10,332.0	—	19.0	—	6.7	10,357.7	745.5	1.5	6.7	753.7	9,420.9	100.00	

¹ 'Other countries' includes general credit exposures to countries where the own funds requirement is less than 0.5% of the group's total. Included in this row are exposures to Austria, Belgium, British Virgin Islands, Canada, Switzerland, Cyprus, Germany, Denmark, Spain, Finland, France, Guernsey, Indonesia, Isle of Man, Italy, Cayman Islands, Monaco, Malta, Netherlands, Norway, New Zealand, Portugal, Sweden and United States, of which Belgium, Cyprus, Germany, Denmark, France, Netherlands, Norway and Sweden have a CCyB rate. All other countries have either no published CCyB rate or a 0.0% CCyB rate.

UK CCyB2 – Amount of institution-specific countercyclical capital buffer

£m	a	
1	Total risk exposure amount ¹	10,701.2
2	Institution specific countercyclical capital buffer rate	1.9
3	Institution specific countercyclical capital buffer requirement	207.7

¹ 'Total risk exposure amount' is equivalent to RWAs in Annex I.

Annex XI: Leverage ratio

The leverage ratio is a transparent, comparable measure not affected by risk weightings. It is calculated as tier 1 capital divided by adjusted balance sheet exposure. Leverage is actively monitored and regularly assessed alongside capital and capital ratios and is reported to the CAC on a monthly basis.

UK LRA – Disclosure of LR qualitative information

(a) Processes used to manage the risk of excessive leverage

The group has policies and procedures in place for the identification, management and monitoring of the risk of excessive leverage. Leverage ratios are computed on a monthly basis through a controlled process and reported to the group finance director and CAC. Leverage ratios are forecast as part of capital planning, including under stress in the ICAAP with a number of enterprise wide scenario analyses which, among other things, forecast accounting expected losses and their impact upon own funds under these scenarios.

Risk of excessive leverage is considered low for the group as the CRR leverage ratio is in excess of 10% (see row 25 of UK LR2).

(b) Factors that had an impact on the leverage ratio during the period

The group's leverage ratio excluding claims on central banks was 12.7% (31 July 2023: 11.4%). The leverage ratio increased on the position at the end of the 2023 financial year, primarily due to the increase in tier 1 capital driven by retained profits and the AT1 issuance. See Annex VII for more information.

UK LR1 – LRSum: Summary reconciliation of accounting assets and leverage ratio exposures

The table below shows a reconciliation between the total assets under IFRS standards and the leverage ratio exposure measure calculated in accordance with CRR.

£m		a
		Applicable amount
1	Total assets as per published financial statements	14,080.8
2	Adjustment for entities which are consolidated for accounting purposes but are outside the scope of prudential consolidation	—
3	(Adjustment for securitised exposures that meet the operational requirements for the recognition of risk transference)	—
4	(Adjustment for exemption of exposures to central banks)	(1,584.0)
5	(Adjustment for fiduciary assets recognised on the balance sheet pursuant to the applicable accounting framework but excluded from the total exposure measure in accordance with point (i) of Article 429a(1) of the CRR)	—
6	Adjustment for regular-way purchases and sales of financial assets subject to trade date accounting	—
7	Adjustment for eligible cash pooling transactions	—
8	Adjustment for derivative financial instruments	(60.3)
9	Adjustment for securities financing transactions (SFTs)	(15.1)
10	Adjustment for off-balance sheet items (i.e. conversion to credit equivalent amounts of off-balance sheet exposures)	185.6
11	(Adjustment for prudent valuation adjustments and specific and general provisions which have reduced tier 1 capital (leverage))	—
UK-11a	(Adjustment for exposures excluded from the total exposure measure in accordance with point (c) of Article 429a(1) of the CRR)	—
UK-11b	(Adjustment for exposures excluded from the total exposure measure in accordance with point (j) of Article 429a(1) of the CRR)	—
12	Other adjustments	(252.5)
13	Total exposure measure	12,354.5

UK LR2 – LRCOM: Leverage ratio common disclosure

The table below shows the composition of the group's leverage ratio at 31 July 2024 in the disclosure format required by the CRR. Certain rows of this table have not been presented as they are not applicable to the group.

£m		Leverage ratio exposures	
		a	b
		31 Jul 2024	31 Jul 2023
On-balance sheet exposures (excluding derivatives and SFTs)			
1	On-balance sheet items (excluding derivatives, SFTs, but including collateral)	13,956.6	13,436.3
2	Gross-up for derivatives collateral provided, where deducted from the balance sheet assets pursuant to the applicable accounting framework	—	—
3	(Deductions of receivables assets for cash variation margin provided in derivatives transactions)	—	—
4	(Adjustment for securities received under securities financing transactions that are recognised as an asset)	—	—
5	(General credit risk adjustments to on-balance sheet items)	—	—
6	(Asset amounts deducted in determining tier 1 capital (leverage))	(252.5)	(263.7)
7	Total on-balance sheet exposures (excluding derivatives and SFTs)	13,704.1	13,172.6
Derivative exposures¹			
8	Replacement cost associated with SA-CCR derivatives transactions (i.e. net of eligible cash variation margin)	2.4	16.4
UK-8a	Derogation for derivatives: replacement costs contribution under the simplified standardised approach	—	—
9	Add-on amounts for potential future exposure associated with SA-CCR derivatives transactions	30.2	21.2
UK-9a	Derogation for derivatives: potential future exposure contribution under the simplified standardised approach	—	—
UK-9b	Exposure determined under the original exposure method	8.9	21.7
10	(Exempted CCP leg of client-cleared trade exposures) (SA-CCR)	—	—
UK-10a	(Exempted CCP leg of client-cleared trade exposures) (simplified standardised approach)	—	—
UK-10b	(Exempted CCP leg of client-cleared trade exposures) (original exposure method)	—	—
11	Adjusted effective notional amount of written credit derivatives	—	—
12	(Adjusted effective notional offsets and add-on deductions for written credit derivatives)	—	—
13	Total derivatives exposures	41.4	59.3
Securities financing transaction (SFT) exposures			
14	Gross SFT assets (with no recognition of netting), after adjustment for sales accounting transactions	22.5	37.6
15	(Netted amounts of cash payables and cash receivables of gross SFT assets)	(15.1)	(31.4)
16	Counterparty credit risk exposure for SFT assets	—	—
UK-16a	Derogation for SFTs: counterparty credit risk exposure in accordance with Articles 429e(5) and 222 of CRR	—	—
17	Agent transaction exposures	—	—
UK-17a	(Exempted CCP leg of client-cleared SFT exposures)	—	—
18	Total securities financing transaction exposures	7.4	6.2
Other off-balance sheet exposures			
19	Off-balance sheet exposures at gross notional amount	1,053.3	1,222.9
20	(Adjustments for conversion to credit equivalent amounts)	(867.7)	(1,029.0)
21	(General provisions deducted in determining tier 1 capital (leverage) and specific provisions associated with off-balance sheet exposures)	—	—
22	Off-balance sheet exposures	185.6	193.9
Capital and total exposure measure			
23	Tier 1 capital (leverage)	1,574.8	1,310.8
24	Total exposure measure including claims on central banks	13,938.5	13,432.0
UK-24a	(-) Claims on central banks excluded	1,584.0	1,937.0
UK-24b	Total exposure measure excluding claims on central banks	12,354.5	11,495.0
Leverage ratio¹			
25	Leverage ratio excluding claims on central banks (%)	12.7	11.4
UK-25a	Fully loaded ECL accounting model leverage ratio excluding claims on central banks (%)	12.7	11.2
UK-25c	Leverage ratio including claims on central banks (%)	11.3	9.8

1 The temporary treatment of unrealised gains and losses measured at fair value through other comprehensive income under CRR article 468 is no longer applicable and so row UK-25b has not been included.

2 Close Brothers is not an LREQ firm so rows 26 to UK-34 are not applicable.

3 The explanations for changes in the leverage ratio are included in UK LRA.

UK LR3 – LRSpl: Split-up of on balance sheet exposures

<i>£m</i>		a
		Leverage ratio exposures
UK-1	Total on-balance sheet exposures (excluding derivatives, SFTs, and exempted exposures), of which:	13,956.6
UK-2	Trading book exposures	669.0
UK-3	Banking book exposures, of which:	13,287.6
UK-4	Covered bonds	187.7
UK-5	Exposures treated as sovereigns	1,984.3
UK-6	Exposures to regional governments, MDB, international organisations and PSE not treated as sovereigns	135.5
UK-7	Institutions	351.9
UK-8	Secured by mortgages of immovable properties	270.8
UK-9	Retail exposures	4,279.8
UK-10	Corporates	3,363.8
UK-11	Exposures in default	234.0
UK-12	Other exposures (e.g. equity, securitisations, and other non-credit obligation assets)	2,479.9

Annex XIII: Liquidity requirements

UK LIQA – Liquidity risk management

(a) Strategies and processes in the management of the liquidity risk

The group adopts a conservative approach to funding and liquidity risk and seeks to maintain a funding and liquidity position characterised by preserving a simple and transparent balance sheet, sustaining a diverse range of funding sources and holding a prudent level of high-quality liquidity. As such, the weighted average maturity of its funding is longer than the weighted average maturity of its lending portfolio.

(b) Structure and organisation of the liquidity risk management function

The Banking division operates a three lines of defence model with Treasury responsible for the measurement and management of the bank's funding and liquidity position and asset and liability risk providing independent review and challenge. ALCO provides oversight of funding and liquidity and supports the relevant senior managers in discharging their senior management function responsibilities.

(c) The degree of centralisation of liquidity management and interaction between the group's units

Funding and liquidity are managed on a legal entity basis with each of the group's divisions (Banking, CBAM and Winterflood) responsible for ensuring it maintains sufficient liquidity for its own purposes. The group's divisions operate independently of each other with no liquidity reliance between them.

(d) Scope and nature of liquidity risk reporting and measurement systems

Funding and liquidity are measured and monitored on a daily basis with monthly reports forming standing items for discussion at both the ALCO and GRCC, with the Risk Committee maintaining overall oversight. Any liquidity and funding issues are escalated as required to the ALCO, and then onwards to the GRCC and the Risk Committee.

(e) Policies for hedging and mitigating the liquidity risk and strategies and processes

The group funding approach is based on the principles of "borrow long, lend short" and ensuring a diverse range of sources and channels of funding. Economic uncertainty has continued over the last 12 months, increasing market competitiveness. Despite the challenges this has presented, the Banking division's ability to fund the loan book has been largely unaffected. The Banking division has actively sought to grow the retail deposit base and optimise the funding mix in light of market conditions. These deposits continue to remain diverse in terms of source, type and tenor, ensuring flexibility and greater optionality. Retail and corporate customer funding is supported by wholesale funding programmes including unsecured medium-term notes and securitisation programmes. The bank has also drawn against the Bank of England's Term Funding Scheme ("TFSME"), that was introduced to support lending in the then prevailing low interest rate environment. Two repayments of the TFSME have been made this year totalling £490 million, with £110 million remaining to be repaid in the coming year. Despite movements in the Banking division's funding base, the balance sheet and subsequent funding plan continues to remain well within internal risk appetites and total available funding is kept well in excess of the loan book funding requirement to ensure funding is available when needed as shown by the NSFR metrics.

(f) An outline of contingency funding plans

A variety of metrics are used to measure the Banking division's funding and liquidity position to ensure compliance with both external regulatory requirements and internal risk appetite. These metrics cover both the short and long-term view of liquidity and funding and have limits and early warning indicators in place that are approved via the ALCO. These metrics include term funding as a percentage of loan book, weighted average tenor of loan book versus weighted average tenor of funding, available cash balance with the Bank of England and liquid to total assets ratio.

Funding is measured and monitored in accordance with the Banking division's funding plan which seeks to ensure that the bank maintains a balanced and prudent approach to its funding risk that is in line with risk appetite. The funding plan is supplemented by metrics that highlight any funding concentration risks, funding ratios and levels of encumbrance.

Liquidity is managed in accordance with regulatory requirements and the Internal Liquidity Adequacy Assessment Process ("ILAAP") which is approved by the board. In addition to regulatory metrics, the Banking division also uses a suite of internally developed liquidity stress scenarios to monitor its potential liquidity exposure daily and determine its HQLA requirements. This ensures that the Banking division remains within risk appetite and identifies potential areas of vulnerability. The outcomes of these scenarios are formally reported to the ALCO, GRCC and the board. The ILAAP is utilised as a basis for running a liquidity scenario within the Recovery Plan, which looks to extend the time horizon of the test and consider contingency funding options available within an prolonged stress.

(g) An explanation of how stress testing is used

Stress testing activity within the group is designed to meet three principal objectives:

1. Inform capital and liquidity planning – including liquidity and funding risk assessment, contingency planning and recovery and resolution planning;
2. Support ongoing risk and portfolio management – including risk appetite calibration, strategic decisioning and planning, risk and reward optimisation and business resilience planning; and
3. Provide a check on the outputs/accuracy of risk models – including the identification of non-linear effects when aggregating risks.

In addition to regulatory metrics, the Banking division also uses a suite of internally developed liquidity stress scenarios to monitor its potential liquidity exposure daily and determine its HQLA requirements. This ensures that the Banking division remains within risk appetite and identifies potential areas of vulnerability. The outcomes of these scenarios are formally reported to the ALCO, GRCC and board.

(h) A declaration approved by the management body on the adequacy of liquidity risk management arrangements

The objectives set out in UK LIQA (a) above form the basis for the Group's Funding and Liquidity Risk Appetite Statement, approved annually by the board, which outlines the specific levels of funding and liquidity risk that the group is willing to assume. Given the materiality of the Banking division, this is primarily focused on the levels of risk assumed within the bank.

The Banking division's ILAAP covers potential event drivers from a range of stress testing scenarios, including idiosyncratic examples. This ensures liquidity management remains a source of strength and features a robust and prudent approach to assessing and maintaining liquidity requirements. The Banking division's ILAAP is combined with Internal Capital Adequacy and Risk Assessments from Winterflood and CBAM, alongside the company considerations, to form the group ILAAP.

The group's LCR is significantly above the regulatory requirement. This is because the nature of the funding model means that it holds higher inflows compared to outflows within the 30-day period and significantly more HQLAs than are required under regulatory metrics.

Liquidity risk is assessed on a daily basis to ensure adequate liquidity is held and remains readily accessible in stressed conditions. Funding and liquidity risks are reviewed at each meeting of the GALCO. For more information see section LIQA (d) above)

For further details see page 104 of the group's Annual Report.

(i) A concise liquidity risk statement approved by the management body

In January 2024, the FCA announced a review of historical motor finance commission arrangements. Despite some challenges this has presented, the Banking division's ability to fund the loan book has been largely unaffected and it continues to retain access to a wide range of funding sources and products. The banking division's funding model continues to provide robust support, and the strength of our "borrow long, lend short" business model provides significant funding resilience, resulting in a stable funding base. Similarly, elevated levels of liquidity have continued to be maintained despite market volatility and uncertainty.

For more information on key ratios and figures on group funding and liquidity see page 61 to 62 of the group's Annual Report and the LCR template (UK LIQ1) and NSFR template (UK LIQ2) below.

UK LIQ1 – Quantitative information of LCR

The table below shows the breakdown of the group's HQLAs, cash outflows and cash inflows, calculated as the simple averages of month-end observations over the 12 months preceding the reporting date, on an unweighted and weighted basis.

£m		a	b	c	d	e	f	g	h

UK LIQB – Qualitative information on LCR, which compliments template UK LIQ1**(a) Main drivers of LCR results**

The group's LCR is driven by a combination of the size of the liquid asset buffer, funding requirements from upcoming maturities and commitments to lend in the Banking division.

(b) Explanations on the changes in the LCR over time

The 12-month average LCR has decreased slightly over the financial year due to net outflows increasing at a higher rate than the liquid asset buffer but remains substantially above regulatory requirements.

Average HQLAs increased due to an increase in the average balance of cash held at the Bank of England and unencumbered holdings of Level 1 securities. Average unweighted net outflows from funding have increased over the year with growth in the retail Easy Access product and shortened tenors in unsecured wholesale funding.

(c) Explanations on the actual concentration of funding sources

The group's approach to funding is conservative and diverse, drawing on a wide range of wholesale and deposit markets including several public debt securities as well as a number of securitisations.

Over the 12 months to 31 July 2024 a greater proportion of funding has been sourced from the retail sector.

(d) High-level description of the composition of the institution's liquidity buffer

The group's liquidity buffer predominantly comprise reserves held at the central bank, highly rated debt securities issued by a restricted range of governments and central banks, and UK covered bonds, which are held and managed centrally by its Treasury function. The liquidity buffer is denominated in sterling and euro, and is in excess of the consolidated buffer requirements in both currencies.

(e) Derivative exposures and potential collateral calls

The group has in place a small number of derivative contracts to hedge interest rate and foreign exchange exposures.

(f) Currency mismatch in the LCR

Liquid assets are denominated in sterling and euro, with the currency mix being subject to internal risk limits and policy requirements which aim to match the liquidity buffer with the currency composition of the balance sheet.

(g) Other items in the LCR calculation that are not captured in the LCR disclosure template

There are no other relevant items.

UK LIQ2 – Net Stable Funding Ratio (NSFR)

The table below shows the breakdown of the group's available stable funding ("ASF") and required stable funding ("RSF"), calculated as the simple averages of quarter-end observations over the 12 months preceding the reporting date, on an unweighted and weighted basis.

£m		a	b	c	d	e
		Unweighted value by residual maturity (average)				Total weighted value (average)
		No maturity	< 6 months	6 months to < 1yr	≥ 1yr	
Available stable funding (ASF) Items

Annex XV: Credit risk quality

UK CRA – General qualitative information about credit risk

(a) Risk statement in accordance how the business model translates into the components of the group's credit risk profile ((f) of Article 435(1) CRR)

Credit risk across the group arises predominantly through the lending and treasury activities of the Banking division. As a lender to businesses and individuals, the group is exposed to credit losses if customers are unable to repay loans and outstanding interest and fees. At 31 July 2024 the group had gross loans and advances to customers amounting to £10.3 billion.

(b) The criteria and approach used for defining the credit risk management policy and for setting credit risk limits (points (a) and (d) of Article 435(1) CRR)

The group seeks to maintain the discipline of its lending criteria, both to preserve its business model and maintain an acceptable return that appropriately balances risk and reward. This is underpinned by a strong customer focus and credit culture that extends across people, structures, policies and principles. This in turn provides an environment for long-term sustainable growth and low, predictable loan losses.

To support this approach, the group maintains a credit risk appetite framework to define and align credit risk strategy with its overall appetite for risk and business strategies as defined by the board.

The group Credit Risk Appetite Statement ("CRAS") outlines the specific level of credit risk that the group is willing to assume, utilising defined quantitative limits and triggers against agreed measures, and covers both credit concentration and portfolio performance measures.

The measures supporting the group CRAS are based on the following key principles:

1. To lend within familiar asset classes, in well-known and understood markets;
2. To operate as a predominantly secured, or structurally protected, lender against identifiable and accessible assets, and maintain conservative loan-to-value ("LTV") ratios across the Banking division's portfolios;
3. To maintain a diversified loan portfolio (by business, asset class and UK geography), as well as a short average tenor and low average loan size;
4. To rely on local underwriting expertise, with authority delegated from the Risk Committee, with ongoing central oversight;
5. To maintain rigorous and timely collections and arrears management processes; and
6. To operate strong control and governance within our lending businesses, overseen by a central group credit risk team.

Ultimate responsibility for the approval and governance of the group CRAS lies with the board, on recommendation from GRCC, with support from the Credit Risk Management Committee ("CRMC"). Performance is monitored against agreed appetites on a monthly basis.

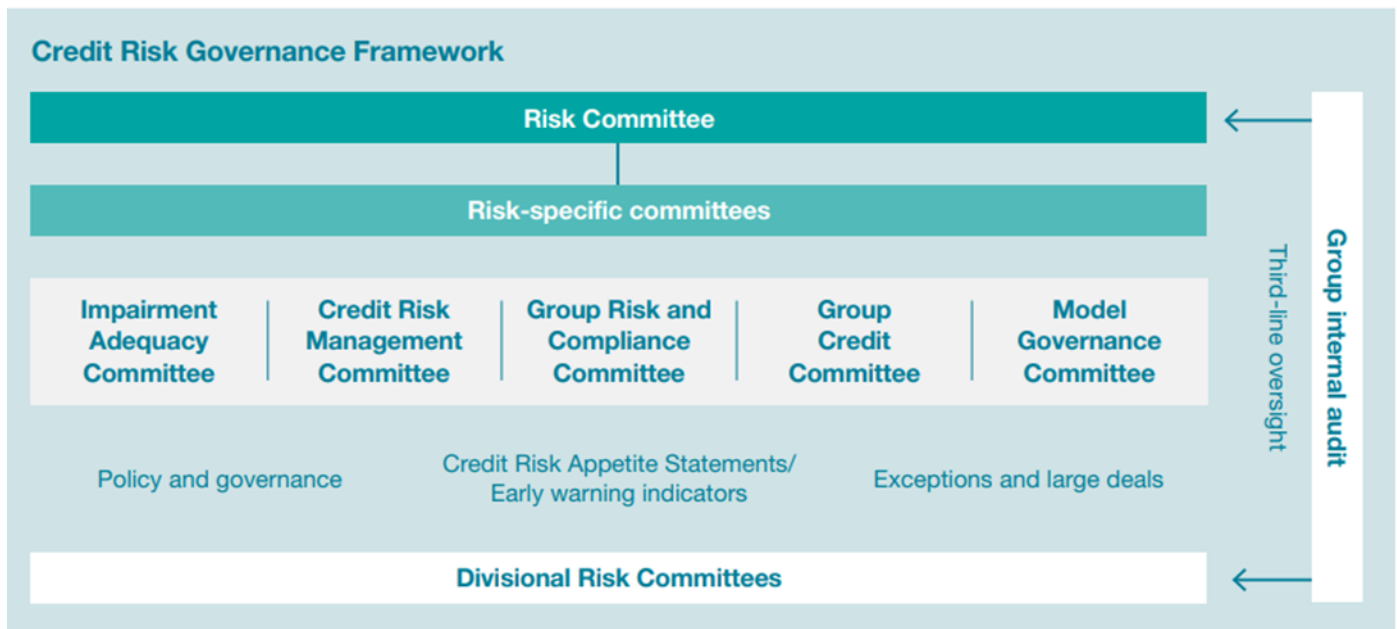

The CRAS is embedded into business unit credit risk management through a hierarchy of local triggers and limits, which are approved by the CRMC. Performance is also monitored monthly via divisions Risk and Compliance Committees ("RCCs"). Material breaches are escalated via established governance channels.

CRAS metrics are closely aligned with the group's overall strategy to facilitate monitoring of the composition and quality of the loan book to ensure it remains within defined appetite.

(c) The structure and organisation of the credit risk management and control function (point (b) of Article 435(1))

Lending is underpinned by a strong control and governance framework both within our lending businesses and through oversight via a central group credit risk team.

The group's credit risk governance framework, as set out over the page, is structured as follows:

Credit underwriting is undertaken either centrally or through regional office networks, depending on the nature of the business and the size and complexity of the transaction. Underwriting authority is delegated from the Risk Committee, with lending businesses approving lower-risk exposures locally subject to compliance with credit policy and risk appetite.

(d) The relationships between credit risk management, risk control, compliance and internal audit functions (point (b) of Article 435(1) CRR)

The credit risk framework aligns with the broader “three lines of defence” approach, with a governance structure flowing from local first line business teams, up to second line Risk Directors (and key oversight committees such as credit committees, divisional RCCs, the CRMC, the Model Governance Committee and the Risk Committee), overlaid with a third line group internal audit function.

Local risk directors assure the quality of underwriting decisions for all facilities within the business’ delegated sanctioning authority level via a quality assurance programme. This programme samples new business underwritten, with a particular focus on lending hotspots; for example, long-tenor agreements, new asset classes, or high LTVs. Outputs are reported at least biannually with consolidated summaries presented to the CRMC.

These underwriting approaches are reinforced by timely collections and arrears management, working in conjunction with the customer to ensure the best possible outcome for both customer and the group.

The local model is supported by central oversight and control. An independent central group credit risk team provides ongoing monitoring of material credit risks through regular reviews of appetite and policy.

UK CRB – Additional information related to the credit quality of assets

(a) The scope and definitions of ‘past-due’ and ‘impaired’ exposures used for accounting purposes and the differences, if any, for accounting and regulatory purposes (in accordance with Article 178 CRR)

For accounting purposes, when objective evidence exists that a financial asset is credit impaired, such as the occurrence of a credit default event or identification of an unlikelihood to pay indicator the financial asset is considered to be in Stage 3 default. As a backstop, all financial assets 90 days or more past due are considered to be credit impaired and transferred to Stage 3. For regulatory purposes, all financial assets 90 days or more past due are treated as in default.

(b) The extent of past-due exposures (more than 90 days) that are not considered to be impaired and the reasons for this

All financial assets 90 days past due or more are considered to be credit impaired.

(c) Description of methods used for determining general and specific credit risk adjustments

All provisions are considered specific credit risk adjustments that are allocated against individual loans.

(d) Definition of a restructured exposure (point (d) of Article 178(3) CRR)

The group applies its identification of distressed restructures in line the definition of forbearance defined in Article 47b of the CRR.

UK CQ7 - Collateral obtained by taking possession and execution processes

The group has no collateral obtained by taking possession recognised on balance sheet so this template has not been presented.

UK CQ8 - Collateral obtained by taking possession and execution processes – vintage breakdown

The group has no collateral obtained by taking possession recognised on balance sheet so this template has not been presented.

Annex XVII: Credit risk mitigation (CRM) techniques

UK CRC – Information related to CRM techniques

(a) Core policies and processes for on- and off-balance sheet netting (Article 453 (a) CRR)

Financial assets and liabilities are offset and the net amount reporting in the balance sheet when the entity has a legally enforceable right to set off the recognisable amounts and intends to settle either on a net basis or to realise the asset and settle the liability simultaneously.

(b) The core features of policies and processes for eligible collateral evaluation (Article 453 (b) CRR)

Policies and procedures govern the protection of the group's position from the outset of a customer relationship for example, requiring standard terms and conditions and through controls over the integrity and, if necessary, realisation of collateral.

Core features include:

- Assets must be sufficiently liquid and their value stable over time;
- The group must have the right to liquidate / retain the asset in a timely manner upon borrower default or insolvency;
- The collateral can be realised within a reasonable timeframe; and
- The CRM technique used should be legally enforceable.

(c) Main types of collateral taken by the group to mitigate credit risk (Article 453 (c) CRR)

As security for its loans, the group takes physical assets (such as property, vehicles or energy installations) as collateral. These physical assets do not have an inherent maturity or expiry date. However, no collateral is recognised to mitigate credit risk under the standardised approach.

(d) Guarantees and credit derivatives used as credit protection (Article 453 (d) CRR)

At 31 July 2024, the group recognised £391.8 million of credit risk mitigation with substitution effect which relate to the loans granted with government guarantees, including those under coronavirus support schemes.

The group does not apply any other unfunded credit protection. Whilst receipt of guarantees is a common feature within the terms of a credit agreement these are not captured in regulatory calculations with the exception of loans granted with government guarantees, including under coronavirus support schemes as noted above. The group does not buy protection via credit derivatives and does not have any credit derivatives in its banking portfolio.

(e) Information about market or credit risk concentrations within the credit mitigation taken (Article 453 (e) CRR)

The group considers credit and market risk concentrations with a view to ensuring that any potential undue concentrations are identified and suitably managed.

UK CR3 - CRM techniques overview: Use of credit risk mitigation techniques

The table below shows the carrying value of loans and advances and debt securities split between unsecured exposures and secured exposures. Exposures for which some security or collateral has been received are classed as secured in this table irrespective of the level of collateralisation or whether the collateral qualifies as eligible credit risk mitigation for credit risk calculated under the standardised approach.

£m		Unsecured carrying amount	Secured carrying amount			
				Of which secured by collateral ¹	Of which secured by financial guarantees Of which secured by credit derivatives	
		a	b	c	d	e
1	Loans and advances	3,682.9	8,739.5	8,605.8	133.7	—
2	Debt securities	724.5	—	—	—	—
3	Total	4,407.4	8,739.5	8,605.8	133.7	—
4	<i>Of which non-performing exposures</i>	72.7	291.9	282.4	9.5	—
5	<i>Of which defaulted</i>	72.7	291.9			

1 No collateral qualifies as eligible credit risk mitigation for credit risk calculated under the standardised approach

Annex XIX: Standardised approach

UK CRD - Information related to standardised model

(a) Names of the external credit assessment institutions (ECAIs) and export credit agencies (ECAs) (Article 444 (a) CRR)

The group uses ECAI ratings provided by Moody's Investors Service ("Moody's") to determine the risk weight of rated counterparties in each standardised credit risk exposure class.

(b) The exposure classes for which each ECAI or ECA is used (Article 444 (b) CRR)

ECAI ratings are used for determining the risk weight of central governments, central banks and institutions. ECAI ratings are used for exposures to multilateral development banks where it is not listed in CRR article 117 and would receive a 0% risk weighting as well as exposure to public sector entities that do not have central government guarantees.

(c) The process used to transfer the issuer and issue credit ratings onto comparable assets items not included in the trading book (Article 444 (c) CRR)

The group applies an unrated risk weight according to the relevant CRR articles for the standardised exposure classes as mentioned above where the ECAI rating is unavailable and does not use issuer or issue credit assessments under CRR article 139.

(d) The association of the external rating of each nominated ECAI or ECA with the risk weights that correspond with the credit quality steps (Article 444 (d) CRR)

ECAIs ratings are mapped across to the Credit Quality Step requirements in CRR using the mapping tables within Commission Implementing Regulation (EU) 2019/2028.

UK CR4 - Standardised approach – Credit risk exposure and CRM effects

The table below shows credit risk exposures pre- and post-application of credit conversion factors ("CCF") and CRM and the RWAs for those exposures.

£m	Exposure classes	Exposures before CCF and before CRM		Exposures post CCF and post CRM		RWAs and RWAs density	
		On-balance-sheet exposures	Off-balance-sheet exposures	On-balance-sheet exposures	Off-balance-sheet amount	RWAs	RWAs density (%)
		a	b	c	d	e	f
1	Central governments or central banks	1,984.3	—	2,376.1	—	41.6	1.7

16	Other items	585.0	—	585.0	—	585.0	100.0
17	Total	13,028.6	1,053.3	13,028.6	108.8	9,429.3	71.8

UK CR5 - Standardised approach

The table below shows a breakdown of exposures post-CCF and post-CRM. Risk weight categories do not reflect where the SME supporting factor has been applied. Exposures are classed as 'rated' only where an ECAI rating has been used to derive the risk weight. Where a rating is unavailable, or where the risk weight has been determined by application of specific CRR provisions, exposures have been classed as unrated.

£m	Exposure classes	Risk weight															Total	Of which unrated
		0%	2%	4%	10%	20%	35%	50%	70%	75%	100%	150%	250%	370%	1250%	Others

Annex XXI: IRB approach to credit risk

The group does not use the Internal Ratings Based (IRB) approaches for credit risk and capital management and so the tables and templates in this annex have not been presented.

Annex XXIII: Specialised lending

The group does not use the Internal Ratings Based (IRB) approaches for credit risk and capital management and so the tables and templates in this annex have not been presented.

Annex XXV: Counterparty credit risk

UK CCRA - Information related to CCR

(a) Methodology used to assign internal capital and credit limits for counterparty credit exposures (Article 439 (a) CRR)

The group does not use the internal ratings approach for rating derivative counterparties. Counterparty credit risk arises from the need to enter derivatives transactions to support the group's treasury operations. Capital allocation is a consequence of those operations. Credit limits are approved at Group Credit Committee under delegated authority from the board.

(b) Policies related to guarantees and other credit risk mitigants (Article 439 (b) and (h) CRR)

The group does not enter into guarantees to mitigate counterparty credit risk. Collateral is posted and received via standard International Swaps and Derivatives Association ("ISDA") agreements with credit support annexes. The group does not have a hedging programme for CVA risk.

(c) Description of policies with respect to Wrong-Way risk (Article 439 (c) CRR)

The group enters into transactions with highly rated counterparties under standard ISDA agreements. Cash collateral is posted or received and provided against these agreements avoiding wrong-way risk.

(d) Any other risk management objectives and relevant policies related to CCR (Article 431 (3) and (4) CRR)

Counterparty credit risk arises only as a consequence of the group's treasury operations and equivalent operations within subsidiaries through a small number of derivatives agreements.

(e) The amount of collateral the group would have to provide if its credit rating was downgraded (Article 439 (d) CRR)

Were the group's credit rating to be downgraded, there would not be any additional collateral requirements.

UK CCR1 - Analysis of CCR exposure by approach

Annex XXVII: Securitisation positions

UK SECA - Qualitative disclosure related to securitisation exposures

(a) Description of securitisation and re-securitisation activities (Article 449(a) CRR)

Two entities within the group are involved in securitisation activities.

CBL securitises its own insurance premium and motor finance loan receivables via the sale of these assets to securitisation special purpose entities ("SSPEs"). The purchase of the underlying receivables is made via the issuance of securities. As the group has retained exposure to substantially all the risk and rewards of the residual benefit of the underlying assets it continues to recognise these assets in loans and advances to customers on its consolidated balance sheet. Securitisations issued under the Orbita Funding public motor programme are simple, transparent and standardised ("STS") compliant. The use of securitisations provides long term funding for the bank whilst supporting our "borrow long, lend short" approach to liquidity management. As at 31 July 2024, CBL has securitised without recourse and restrictions £1,657.0 million (31 July 2023: £1,436.3 million) of its insurance premium and motor loan receivables in return for cash and securities in issue of £1,453.7 million (31 July 2023: £1,187.4 million).

Close Brothers Finance DAC (formerly Bluestone Motor Finance (Ireland) DAC), a subsidiary of CBL acquired during the year ended 31 July 2024, securitises its motor finance loan receivables via a forward flow agreement with notes issued by a SSPE, Magna Auto Funding No. 1 DAC ("Magna"). The risks and rewards have been substantially transferred and therefore the underlying assets have been de-recognised from the consolidated balance sheet and excluded from credit risk RWA calculations under Chapter 2 of Title II of Part Three of the CRR. The group has exposure to the securitisation via the retention of 5% of the nominal value of each tranche sold to investors. The retained notes are recognised on the consolidated balance sheet and risk-weighted in accordance with section 3 of Chapter 5 of Title II of Part Three of the CRR.

The group does not have any re-securitisation exposures.

(b) The type of risk Close Brothers are exposed to in securitisation and re-securitisation activities (Article 449(b) CRR)

(i) risk retained in own-originated transactions

The group holds the first loss tranche on its insurance premium securitisation issued by Close PF Funding 1 Limited.

Under the Orbita Funding public motor securitisation programme, the group retains the mezzanine and junior positions issued by Orbita Funding 2022-1 Plc and Orbita Funding 2023-1 Plc. Both transactions are STS compliant.

The group retains 5% of the securitisation positions issued by Magna as a vertical slice across the senior and mezzanine tranches sold to third parties.

(ii) risk incurred in relation to transactions originated by third parties

The group does not have any exposure to securitisations originated by third parties.

(c) Approaches to calculating the risk-weighted exposure amounts (Article 449(c) CRR)

For transactions originated by CBL the group has retained substantially all the credit risk and rewards of its securitised exposures, and therefore continues to recognise these in loans and advances to customers on its consolidated balance sheet. The risk-weighted exposure amounts on the underlying assets are calculated in accordance with the Chapter 2 of Title II of Part Three of the CRR under the credit risk framework.

Loan receivables securitised via the forward flow transaction originated by Close Brothers Finance DAC have been derecognised from the consolidated balance sheet and significant credit risk associated with the underlying assets has been transferred to third parties. The underlying assets are therefore excluded from the calculation of risk-weighted exposure amounts. The group retains a vertical slice of 5% of the nominal value of each of the tranches sold to investors, and applies a 1,250% risk weight to the retained securitisation positions in accordance with section 3 of Chapter 5 of Title II of Part Three of the CRR.

(d) A list of SSPEs (Article 449(d) CRR)

SSPE name	(i) Acquire exposures originated by the group	(ii) Sponsored by the group	iii) To which the group provides securitisation-related services	iv) Included in the regulatory scope of consolidation
Close PF Funding 1 Limited	✓	✓	✓	✓
Orbita Funding 2020-1 Plc ¹	✗	✓	✓	✓
Orbita Funding 2022-1 Plc ¹	✗	✓	✓	✓
Orbita Funding 2023-1 Plc	✓	✓	✓	✓
Magna Auto Funding No. 1 DAC	✓	✗	✗	✗
Topaz Asset Finance 2019-1 DAC ¹	✗	✗	✗	✓
Topaz Asset Finance 2020-1 DAC ¹	✗	✗	✗	✓

¹ SSPE is dormant or in run-off and no longer acquiring exposures originated by the group as at 31 July 2024.

(e) A list of legal entities in relation to which Close Brothers have disclosed that they have provided support (Article 449(e) CRR)

There are no legal entities to which the group has disclosed that they have provided support in accordance with Chapter 5 of Title II of Part Three.

(f) A list of legal entities affiliated with Close Brothers that invest in securitisations originated by the institutions or in securitisation positions issued by SSPEs sponsored by the institutions (Article 449(f) CRR)

There are no legal entities affiliated with the group that invest in securitisation positions issued by the group or SSPEs sponsored by the group.

(g) A summary of accounting policies for securitisation activity (Article 449(g) CRR)

Financial assets are derecognised when the contractual rights to receive cash flows from the financial assets have expired or where the group has transferred the contractual rights to receive cash flows and transferred substantially all risks and rewards of ownership.

For transactions originated by CBL, substantially all the risks and rewards of the underlying assets has been retained and therefore all financial assets continue to be recognised on the group's consolidated balance sheet, together with the financial liability for the debt securities in issue.

For the Magna securitisation, substantially all the risks and rewards have been transferred and therefore all underlying assets are derecognised from the group's consolidated balance sheet. The retained position in the senior and mezzanine tranches is recognised on balance sheet, together with the financial liability for the debt securities in issue.

(h) The names of the ECAs used for securitisations and the types of exposure for which each agency is used (Article 449(h) CRR)

The group uses the following ECAs to obtain external credit ratings on its Orbita Funding securitisations: Fitch Ratings Limited and Moody's Investor Services. The appointment of ECAs is reviewed at each new issuance and may change from time to time.

No other securitisation positions are rated externally.

(i) A description of the Internal Assessment Approach (Article 449(i) CRR)

The group does not use the Internal Assessment Approach in order to calculate risk-weighted exposure amounts.

UK SEC1 - Securitisation exposures in the non-trading book

The table below shows the retained carrying amount of securitisation exposures for all securitisations.

£m	a	b	c	d	e	f	g	h	i	j	k	l	m	n	o

Annex XXIX: Standardised approach and internal model for market risk

UK MRA - Information related to market risk

(a) The group's strategies and processes to manage market risk (Points (a) and (d) of Article 435 (1) CRR)

Traded market risk in the group only arises in Winterflood Securities Ltd, whose core business is to provide liquidity and interact with the market on a principal basis, holding positions in financial instruments as a result of its client facilitation activity.

The group's non-traded market risk exposure consists of interest rate risk in the banking book ("IRRBB"), credit spread risk in the banking book ("CSRBB") and foreign exchange ("FX") risk.

IRRBB is predominantly incurred in the Banking division as a result of its lending and funding activities. Interest rate risk in the group's other divisions is considered to be immaterial. Further information on IRRBB is provided in annex XXXVII on pages 69 to 73.

CSRBB arises from the HQLA portfolio held in the Banking division.

FX risk is incurred across the group and arises from foreign currency loan commitments; translating foreign currency assets, liabilities and profits; and non-sterling investments.

The group has a restricted appetite for interest rate risk which is limited to that required to operate efficiently. The group's policy is to match repricing characteristics of assets and liabilities naturally. Where this is not possible, vanilla interest rate swaps are used to hedge the risk within prescribed limits.

The group has a limited appetite for CSRBB which occurs due to the HQLA portfolio. The portfolio primarily comprises of highly rated UK and European supranational debt, sovereign debt, agency bonds and UK covered bonds.

The group has a restricted appetite for FX risk. It avoids large open positions and sets individual currency limits to mitigate the risk.

The group recognises three main sources of IRRBB which could adversely impact future income or the value of the balance sheet:

- Repricing risk – the risk presented by assets and liabilities that reprice at different times;
- Embedded optionality risk – the risk presented by contractual terms embedded into certain assets and liabilities; and
- Basis risk – the risk presented by a mismatch in the interest rate reference rate for assets and liabilities.

The group maintains a limited appetite for interest rate risk with simple hedging strategies in place to mitigate risk. The Banking division's treasury is responsible for hedging the non-traded interest rate risk. Any residual risk which cannot be naturally matched is hedged utilising vanilla derivative transactions to remain within prescribed risk limits. GALCO and ALCO are respectively responsible for approving any changes to hedging strategies before implementation for the group and Banking division.

Derivative transactions can only be undertaken with approved counterparties and within the respective credit risk limits assigned to those counterparties.

All marketable securities are "hold to collect and sell" and have their interest rate exposure hedged on a back-to-back basis with vanilla interest rate swaps. The exception to this is the £250 million group bond held in the group, which is hedged as part of the portfolio mix. FX exposures are generally hedged using foreign exchange forwards or currency swaps with exposures monitored daily against approved limits.

(b) The structure and organisation of the market risk management function (Point (b) of Article 435 (1) CRR)

As noted in Annex III, UK OVA (a), risk appetite is set on a top-down basis by the board.

GALCO monitors the non-traded market risk exposure across the group's balance sheet. ALCO monitors the non-traded market risk exposure for the Banking division. Treasury is responsible for the day-to-day management of all non-traded market risk exposure for the Banking division. Day-to-day oversight is exercised via a combination of daily reporting by the treasury finance team, and divisional RCC review and challenge. Further independent oversight is provided via the second line of defence through the asset liability management risk team ("ALM Risk"), with monthly reporting into ALCO and GALCO.

(c) Scope and nature of risk reporting and measurement systems (Point (c) of Article 435 (1) CRR)

Traded Market Risk

Traded market risk is measured against a set of defined risk limits set at overall global, desk and individual stock levels, on both an intraday and end-of-day basis. These limits are monitored via a combination of internally developed and external, industry-leading systems on an intraday and overnight basis against a limit framework aligned to the group's risk appetite. The framework incorporates:

- Market risk appetite being managed via trading book exposure limits. These are set using gross cash positions and the sterling value of a basis point ("SV01") for products with interest rate exposure;
- Adoption of a real-time limit monitoring system, along with end-of-day summary reports to track equity, fixed income, and FX exposures against agreed limits; and
- Minimal exposure to derivatives (limited to hedging of interest rate exposures and FX positions resulting from trades in foreign securities).

Non-Traded Market Risk

Treasury holds assets for the purpose of liquidity management; all treasury assets as of 31 July 2024 were LCR level 1. Derivatives are used to mitigate interest rate risk exposure from treasury assets.

Credit spread risk arises on the bonds held in the HQLA portfolio and specifically to the change in the value of a bond relating to a change in a bond's credit spread, which is the difference between a bond's total interest rate and the corresponding risk-free interest rate, and represents the perceived creditworthiness of that bond.

IRRBB is assessed and measured on a behavioural basis by applying key behavioural and modelling assumptions including but not limited to, those related fixed rate loans subject to prepayment risk, the behaviour of non-maturity assets and liabilities, the treatment of own equity, and the expectation of interest rate options. This assessment is performed across a range of regulatory prescribed and internal interest rate shocks approved by the bank's ALCO.

Two measures are used for measuring IRRBB, namely Earnings at Risk ("EaR") and Economic Value ("EV"):

- EaR measures short term impacts to earnings, including basis risk, highlighting any earnings sensitivity should rates change unexpectedly; and
- EV measures longer term earnings sensitivity due to rate changes, highlighting the potential future sensitivity of earnings, and any risk to capital.

The group recognises three categories of FX risk:

1. transaction risk; the risk relating to foreign currency loan commitments;
2. translation risk: the risk relating to converting foreign currency balances and profits into sterling;
3. structural FX risk: the risk relating to the potential impact on capital ratios relating to non-GBP exposures.

Transaction risk is measured daily within treasury based on net cash flows and contracted future exposures. Treasury's strategy is to hedge the FX risk as soon as it arrives, and to have zero FX transaction exposure each day at close of business.

Translation risk is monitored within each business monthly, translating non-UK profits regularly to mitigate fluctuations in FX rates. Structural FX risk is assessed at least annually as part of the group's ICAAP and is deemed to be immaterial.

Banking businesses have operational processes and controls in place to monitor their exposure to IRRBB and ensure it remains within approved local risk appetites. Any exceptions are reported to ALM Risk on the same working day. Residual IRRBB that is not transferred into treasury for central management through the Banking division's funding transference process is monitored by the businesses through their respective RCCs, treasury's first line of defence, and ALM Risk.

ALM Risk is responsible for maintaining processes and controls to monitor the group position and report exposures to ALCO and GALCO, and subsequently to GRCC and the Risk Committee. An ALM system is deployed as the primary source for IRRBB reporting and risk measurement.

The group does not use an internal Market Risk Model for market risk and so this template has not been presented.

UK MR2-A – Market Risk under the Internal Model Approach (IMA)

The group does not use an Internal Model Approach for market risk and so this template has not been presented.

UK MR2-B – RWA flow statements of market risk exposures under the IMA

The group does not use an Internal Model Approach for market risk and so this template has not been presented.

UK MR3 – IMA values for trading portfolios

The group does not use an Internal Model Approach for market risk and so this template has not been presented.

UK MR4 – Composition of VaR estimates with gains/losses

The group does not use an Internal Model Approach for market risk and so this template has not been presented.

Annex XXXI: Operational risk

UK ORA - Information on operational risk

(a) Risk management objectives and policies (Points (a), (b), (c) and(d) of Article 435(1) CRR)

Definition, strategies and processes

Operational risk is the risk of loss or customer harm resulting from inadequate or failed processes, people and systems or external events. This includes the risk of being unable to recover systems quickly and maintain critical services.

Impacts to our business, customers, third parties and the markets in which the group operates are considered within a maturing framework for resilient delivery of our important business services and setting of impact tolerances.

Operational risk is a core component of the ERMF and is embedded in day-to-day business activities. Requirements and responsibilities are set out in the Operational Risk Policy and supporting standards and procedures as part of the framework to identify, assess, mitigate, monitor and report the operational risks, events and issues that could impact the achievement of business objectives or impact core business processes.

Exposures

The principal operational risks to the group, which could result in customer detriment, unfair customer outcomes, financial loss, disruption and/or reputational damage include:

- Inadequate protections against internal and/or external crime, including cyber-attack and economic crime.
- Failure of business processes, IT and/or critical third parties, including inability to timely recover from failure (e.g. of IT systems or data) within agreed impact tolerance.
- Failure to ensure compliance with increasingly complex and detailed regulation.
- Failure to implement the policies, procedures, and culture to enable the Group to appropriately manage its people risks. This includes recruitment, remuneration, retention, and succession; capability and development; colleague wellbeing; and continuity / resilience.
- Failure to appropriately manage the group's exposure to direct and indirect impacts in relation to conduct. This includes the group's culture, products and services and customer treatment strategies, as well as market misconduct. The introduction of Consumer Duty has increased regulatory expectations in relation to customer outcomes, including how the group demonstrates and measures them. The group is also continuing to engage closely with the FCA and Financial Ombudsman Service on the historic motor finance commission arrangements.

A number of these risks could increase where there is a reliance on third party suppliers to provide services to the group or its customers, acknowledging the increasing complexity in the supplier eco-system.

Additionally, the group's exposure to operational risk is impacted through the need to engage with innovative, dynamic third parties; delivery of new products and services; and effective use of reliable data in a changing external environment, to support delivery of the group's strategic objectives.

We operate controls over the group's most significant operational risks ensuring there are near-term mitigation strategies where risks are greatest and ensure these are sufficient to prevent material disruption of our service to customers and/or our businesses.

Structure and organisation of the risk management function for operational risk

Businesses are responsible for the day-to-day management of operational risk, with oversight from the risk and compliance function, and independent assurance activities undertaken by group internal audit.

The board delegates authority to the GRCC to manage the group's operational risk framework on a day-to-day basis and provide oversight of its exposure. The committee is supported by the Operations and Technology Risk Committee which is responsible for oversight of technology, information security, third-party and certain other resilience related risks. Regular management information is presented to and discussed by these committees and additionally local business RCCs.

The Risk function has a dedicated operational risk team which is responsible for maintaining the framework, tool sets and reporting necessary for effective operational risk management. The group has identified, assessed and monitored all key operational and resilience risks, including undertaking a biannual assessment of control effectiveness, monitoring key risk indicator trends and escalating events, in accordance with policy and standard requirements. In the second line, operational risk managers are aligned to businesses, with an additional technical second line of defence team providing specialist oversight of technology, information security, data, resilience and third-party risks. Monitoring of all operational risk domains is conducted via divisional RCCs with escalation to the GRCC and Risk Committee as appropriate.

Measurement and reporting

Operational risk is managed across the group through an operational risk framework and policies. This framework includes a risk and control self-assessment process, risk impact likelihood matrix, risk and control indicators, risk appetite setting, a robust operational loss event management and escalation process, and use of scenario analysis. This is supplemented by group-level and local management information and reporting across a suite of defined KRIs, which are regularly monitored via local, divisional and group committees with exceptions reported to GRCC and the Risk Committee.

Lessons are learned and root cause analysis is undertaken, with appropriate management action plans implemented. Losses may result from both internal and external events and are categorised using risk categories defined as part of the taxonomy deployed within our risk management tool.

The delivery of a standardised framework and management information across all operating risks is complemented by periodic thematic reviews conducted on key focus areas and reviewed by the GRCC and Board Risk Committee. In the last year these have covered change execution including technology services material outsourcing, third party risk, fee remediation and fraud. Further independent assurance is obtained through reviews conducted by the compliance monitoring team and specialist external partners (e.g. cyber risk management) and group internal audit.

The Risk function performs a level of oversight of the group's business planning process, including analysis of industry trends or forward-looking threats that could lead to material impact on our ability to deliver on the strategic objectives or result in a significant impact on assessment of operational risk capital.

Stress testing

Operational risk losses and scenario analysis is used to inform the Internal Capital Adequacy Assessment Process (ICAAP). The group calculates its minimum (Pillar I) operational risk capital requirements using a mix of The Standardised Approach ("TSA") and Alternative Standardised Approach ("ASA"). Pillar II is calculated using internal and external loss data and extreme but plausible scenarios that may occur in the next 12 months.

A suite of operational risk scenarios using internal and external data has been developed and is regularly reviewed and refreshed. These scenarios provide insights into the stresses the business could be subject to given plausible but severe circumstances. Scenarios cover material operational risks across key risk domains and are developed by businesses and senior management across the group with the process facilitated by the Risk function, GRCC and the Risk Committee, as part of the ICAAP process, to support the setting of operational risk Pillar 2a capital. Management actions are agreed and monitored and linked with business resilience and continuity testing where appropriate.

Policies for hedging and mitigating operational risk

The group continues to focus on risk management requirements and developing the processes, systems and people skills and capabilities needed to mitigate risks.

The group is prepared to tolerate a level of operational risk exposure within agreed thresholds and limits but has limited appetite for operational risks with significant residual exposure and as such requires a near-term mitigation strategy for any such identified risks.

A level of resilience risk from internal and external events is tolerated; however, immediate steps are taken to minimise customer disruption through recovery within pre-defined parameters and timelines. In line with the group's conservative approach to risk management, controls are implemented in a manner that reduces the likelihood of higher-impact risk events crystallising. Further, the group monitors aggregate loss trends and seeks to limit aggregate losses arising in any given year.

(b) Approaches for the assessment of minimum own funds requirements (Article 446 CRR)

TSA is used for Winterflood, CBAM and non-lending income in the Banking division. The ASA is applied to the loan book and securities exposures in the Banking division.

(c) Description of the AMA methodology approach used (Article 446 CRR) and (d) use of insurance for risk mitigation (Article 454 CRR)

The group does not apply the Advanced Measurement Approach ("AMA").

UK OR1 - Operational risk own funds requirements and risk-weighted exposure amounts¹

Annex XXXIII: Remuneration policy

On 5 December 2023 the PRA published Policy Statement PS 16/23 which amends the proportionality requirements applying to remuneration disclosures. These amendments apply to a firm's performance year starting on or after 8 December 2023 and therefore will apply for the first time to disclosures for the year-ended 31 July 2025. For the year-ended 31 July 2024 the proportionality levels set out in the PRA's Supervisory Statement on Remuneration (SS2/17) as at 1 August 2023 apply.

Under the Supervisory Statement the group is classed as proportionality level three and is only required to disclose information related to CRR articles 450(1)(a), 450(1)(b), 450(1)(g) and the first part of 450(1)(h) and so templates UK REM1, UK REM2, UK REM3, UK REM4 have not been presented as well as additional information in UK REMA. The qualitative information in table UK REMA is presented in a flexible format covering the group's remuneration policy.

UK REMA – Remuneration policy

Approach to Remuneration

In accordance with the Remuneration Code, a firm must establish, implement and maintain remuneration policies, procedures and practices that are consistent with and promote sound and effective risk management. Policies and procedures must be comprehensive and proportionate to the nature, scale and complexity of the firm's activities. The group ensures its approach to remuneration, and in particular variable pay, is aligned with clear risk principles which aim to drive sustainable growth, with no reward for inappropriate risk taking.

The Remuneration Part of the PRA Rulebook and the FCA Remuneration Code require the group to identify Material Risk takers ("MRTs"), being those staff whose activities have a material impact on the firm's risk profile. The group employed a total of 112 individuals who were identified as MRTs for the year ended 31 July 2024.

RemCo Membership

The Remuneration Committee ("the Committee") comprises Tracey Graham as chair, together with Mike Biggs and Mark Pain. Peter Duffy stood down from the Committee on 15 February 2024. The Committee met five times during the year, in-line with the annual meeting timetable.

RemCo Responsibilities

The RemCo's main responsibilities are to:

- Review and determine the total remuneration packages of executive directors and other senior executives, including our MRTs, in consultation with the chairman and chief executive and within the terms of the agreed policy;
- Approve the design of any performance related pay schemes operated by the group;
- Review the design of all employee share incentive plans;
- Ensure that contractual terms on termination and any payments made are fair to the individual and the group, that failure is not rewarded and that a duty to mitigate loss is fully recognised;
- Review any major changes in employee benefits structures throughout the group;
- Select, appoint and determine terms of reference for independent remuneration consultants to advise the RemCo on remuneration policy and levels of remuneration;
- Ensure that the remuneration structures in the group are compliant with the rules and requirements of regulators and relevant legislation;
- Review and approve individual sales incentives schemes operated in the group and monitor and oversee the operation of those schemes;
- Ensure that provisions regarding disclosure of remuneration are fulfilled;
- Seek advice from group chief risk officer to ensure remuneration structures and annual bonuses are appropriately aligned to the group's risk appetite; and
- Assess and challenge reward outcomes across the group to encourage and ensure pay equity and non-discriminatory practices.

Advice

During the year under review the RemCo consulted and took advice from Deloitte, the chairman of the board, the chief executive, the group head of human resources, the group head of reward and hr operations, the group chief risk officer and the group company secretary. Where the Committee seeks advice from employees, such as anyone in a control function, this never relates to their own remuneration.

Remuneration Philosophy

The reward structure aims to:

- Attract, motivate and retain high calibre employees across the group;
- Reward good performance;
- Promote the achievement of the group's annual plan and its long-term strategic objectives;
- Align the interests of employees with those of all key stakeholders, in particular our shareholders and clients, as well as other key stakeholders including regulators; and
- Support effective risk management and promote a positive corporate culture and appropriate conduct to both employees and clients.

Our Approach to Remuneration

The cultural attributes which unite our work force are prudence, integrity, teamwork, service, expertise and relationships. Together these define our culture and the positive behaviours that underpin the high service levels we deliver to our customers. In order to attract the calibre of employees who can support these attributes, compensation must be competitive and designed to encourage the right behaviours.

Although the risk profile of the business is short-term in nature, we seek to promote prudence, strong client relationships and sustained performance over the medium to long term with a remuneration structure for executives and senior employees which includes levels of deferral of the annual bonus and a Long Term Incentive Plan subject to performance measures applicable over a three year period.

All our businesses have a “pay for performance” model. Performance management is integral to our annual compensation review processes and assessment of performance for discretionary bonus awards takes into account a broad range of performance measures, both financial and non financial. These include an assessment of risk management behaviour which ensures that negative behaviours are penalised, resulting in lower or no variable compensation, regardless of financial performance. Our review process to determine annual awards is detailed below.

All employees have individual objectives against which their personal performance is rated. These objectives can include financial metrics (or function-specific objectives where appropriate), but also include all cover non-financial measures, including but not limited to risk management and behavioural objectives appropriate to their roles. Assessment is based on current key performance indicators, as well as long-term actions, where appropriate. We operate a rating approach to both delivery and behavioural performance and employees are rated on a scale of Exceptional to Action Required. We review distribution of overall performance ratings against a bell curve to encourage differentiation.

These performance ratings feed the remuneration recommendations for all employees. There is a challenge process, which includes input from senior management and divisional HR, Risk and Compliance. Subsequently there is a further challenge process conducted by Group HR and the Group Executives, with input from Group Risk, Compliance and Internal Audit.

Employees in control function roles have within their total remuneration a greater proportion of fixed pay than those in the front office. Their variable compensation is determined independently from their business unit’s performance, and Group Heads of the control functions provide oversight of compensation decisions within their functions, and all MRTs’ compensation is reviewed and approved by the Committee.

In line with our Risk-Adjustment Policy, the Group Chief Risk Officer reports independently to the RemCo to ensure that risk and control considerations are accounted for when recommending the overall discretionary bonus proposals and individual bonuses. This process is based on: a top-down approach which considers risk at a portfolio level across the group and its businesses, by comparing the risk profile against risk appetite, and a bottom-up approach which considers individuals’ performance against their risk related objectives and contribution to the risk and control environment and associated culture (including positive risk behaviours).

In light of the FCA’s review of discretionary commission arrangements in the motor finance market, we are proposing to add flexibility to operate an interim restricted stock incentive model. Given the challenge of setting robust and meaningful performance metrics, we believe this interim approach is aligned with:

- Retaining and motivating an executive team focused on executing our strategy and protecting our valuable franchise;
- Incentivising and rewarding stewardship of the business during this period of uncertainty; and
- Increasing the executive directors equity stake in the business in the long term interests of all of our stakeholders.

Subject to shareholder approval at the November 2024 Annual General meeting, the Performance Share Award to be granted in 2025 will:

- Replace the performance share award under the Long Term Incentive Plan (“LTIP”) to be granted in October 2024, together with the annual bonus for the 2025 financial year; and
- Be granted at up to 80% of base salary;
- Be subject to performance underpins:
- The restricted share awards will vest 100% after year 3 subject to assessment against the performance underpins. The award will also be subject to a two-year holding period. This is to reflect that the current LTIP has a 5-year time horizon; and
- Consistent with the normal course policy, clawback periods will continue to be seven years, extendable to 10 years.

Remuneration Schemes for Code Staff

Remuneration Code Staff (also known as Material Risk Takers) comprises categories of staff whose professional activities have a material impact on the firm’s risk profile (“Code Staff”), as stipulated by the Remuneration Part of the PRA Rulebook and the FCA Remuneration Code. The remuneration of Code Staff is subject to specific requirements within the Remuneration Code.

Remuneration

Base Salary

The base salary is designed to attract and retain high calibre employees and reflect an employee’s role, skills and knowledge. Salaries are set annually based on an individual’s role and experience, pay for the broader employee population and external factors, where applicable.

Bonus Schemes

The majority of employees in the group have the potential to receive a performance related element of pay as part of their overall compensation package. This element is based on a combination of the overall assessment of the performance of the business and individual performance. Employees have individual objectives against which their personal performance is rated. In addition to the

assessment of performance against these objectives (conducted by an individual's line manager as part of their overall performance review) the group chief risk officer reports independently to the RemCo on behalf of group risk, compliance and internal audit to ensure that any concerns highlighted by the control functions during the year are appropriately addressed in individual remuneration proposals.

A portion of any discretionary bonus above certain thresholds and for certain individuals is deferred. The Group Chief Executive and Group Finance Director have 60% of their award deferred. Deferral is generally made into Close Brothers Group plc shares but in certain areas, where it is appropriate for the business based on the risk profile of that business, this may be deferred in cash or a cash plan. Both cash and deferred awards for Code Staff are typically subject to forfeiture, malus and clawback provisions. The malus provisions mean that the awards may be subject to forfeiture or may be reduced after grant in certain adverse circumstances. The clawback provisions mean that the awards already paid out may be subject to repayment in certain circumstances.

The aggregate level of bonuses is determined by reference to group and divisional metrics, including financial and non-financial metrics, such as risk, compliance and conduct.

A relatively small percentage of staff in the group are eligible for formulaic bonus schemes, which are typically structured to generate business, but operate in line with the general principles of the group's bonus arrangements with individual performance and behaviours assessment, and appropriate risk controls.

Performance Share Award ("PSA")

The PSA, granted in 2024, will be delivered through nil cost options awards and will vest after 3 years, subject to performance underpins including:

- Individual: At least strong performance rating;
- Financial: The group achieving a CET1 of at least 1% above regulatory requirement at vesting, calculated on a standardised basis;
- Non-Financial: satisfactory progress against strategic objectives designed to promote long term success of the business¹; and
- Risk: No material regulatory censure relating to the executive directors' time in office¹.

For all members of the Group ExCo, including executive directors' there is an additional two-year holding period after vesting, therefore the overall restricted period in five years. The PSA is subject to forfeiture, mauls and clawback provisions.

1. These performance conditions are for executive directors only.

Close Brothers Asset Management ("CBAM") Incentive Investment Plan ("IIP")

Deferred awards made to CBAM employees are typically made under the CBAM Incentive Investment Plan, alternatively a small population of CBAM employees can choose to defer into CGB plc shares. Awards from the CBAM IIP cliff vest in cash after three years subject to achieving Adjusted Operating Profit/Operating margin and net flows thresholds. A new performance period starts each year i.e. with each grant. The scheme is subject to forfeiture conditions and malus conditions for Code Staff participants.

Risk Management

The remuneration policy approved by the RemCo is designed to promote sound and effective risk management and to ensure that risk taking within the group does not exceed the group's risk appetite (collectively and individually). The RemCo approves changes to compensation structures for groups of individuals and mandates the involvement of group risk in determining new structures to ensure that they are appropriately aligned to the risk profile of the business in which they operate. The group chief risk officer, group head of compliance, internal audit, and the divisional heads of risk and compliance are closely involved in the remuneration process to ensure that remuneration practices support this. The Group Chief Risk Officer reports independently to the RemCo to ensure that remuneration decisions and practices support these objectives. Risk and compliance provide input into, and independent review of, the remuneration policies of the company.

Discretionary bonuses can be adjusted for positive and negative risk and compliance assessments at both an overall spend level (top-down) and individual level (bottom-up), on an ex-ante and ex-post basis. Further details of how the risk adjustments are assessed are as follows:

Top-down review

- Considers risk at a portfolio level across the group and its businesses by comparing the risk profile against risk appetite; and
- Includes a review of audit reports, risk assurance work and Audit, Risk and Compliance Committee papers, which would identify areas of concern and areas of achievement. It also considers the concept of 'tone from the top'.

Bottom-up review

- Considers individual performance against stated risk related objectives, wider compliance and contributions to the risk and control environment. Includes individual performance reviews and ratings (including behavioural), input from Compliance and Group Internal Audit on their observations throughout the period, and a review of all relevant data capture systems which record risk events.

Ex-ante review

- Ex-ante risk-adjustment refers to adjustments made to take account of intrinsic risks that are inherent in the group's business activities. For example, this could be based on the potential for unexpected losses or weak systems and controls that could result in a risk of undetected conduct failings. The Group Chief Risk Officer provides a written paper to the RemCo identifying any potential ex-ante risk.

Ex-post review

- The adjustment of variable remuneration to take account of specific crystallised risk or an adverse performance outcome including those related to misconduct. Ex-post adjustments may include reducing current year awards and the application of malus, and claw-back, particularly in line with regulatory expectations that ex-post adjustments are made where there has been a material adverse impact on the firm's stakeholders, including customers and shareholders. The Group Chief Risk Officer provides a written paper to the RemCo identifying any potential ex-post risk.

Recovery and Withholding

As outlined in the sections above, variable remuneration for Code Staff is subject to both malus and clawback.

The cash bonus is subject to clawback from award for a period of seven years (extendable to ten years where the group or a regulatory authority has started an investigation) for executive directors and group and Banking Senior Management Function ("SMF"), seven years for "Higher Paid" code staff in group and Banking, three years in CBAM and Winterflood, and one year for other Code Staff.

The deferred bonuses for Code Staff are subject to malus prior to vesting. In addition, the deferred bonuses for Code Staff are subject to clawback from the date of grant for the period of seven years (extendable to ten years where the group or a regulatory authority has started an investigation) for executive directors and group and Banking SMF, seven years for "Higher Paid" Code Staff and five years for other Code Staff in group and Banking. Clawback for Code Staff in CBAM and Winterflood is for a period of four years.

The PSA is subject to malus for the three year period to the point of vesting. In addition, the PSA is subject to clawback from the date of grant for seven years (extendable to ten years where the group or a regulatory authority has started an investigation) for executive directors and SMF, seven years for "Higher Paid" code staff and five years for other Code Staff.

The events which may trigger malus are as follows:

- The assessment of any performance target or condition in respect of an award or the information used to determine the number of shares subject to an award was based on material error, or materially inaccurate or misleading information;
- (a) You have been terminated for misconduct, or have been issued with a formal disciplinary warning for misconduct under the Company's disciplinary policy; or (b) if you have left employment, the Remuneration Committee becomes aware of circumstances that, in its reasonable opinion, if you had still been in employment, would have led to your employment being terminated for misconduct or to the issue of a formal disciplinary warning for misconduct under the firm's disciplinary policy;
- An event has occurred which has caused, or in the opinion of the Remuneration Committee is reasonably likely to cause, serious reputational damage to the Company or any member of the group, and for which the Remuneration Committee determines you were wholly or partly responsible;
- The Company or any member of the group suffers a material loss, financial or otherwise, where you have operated outside the risk parameters or risk profile applicable to your position and for which the Remuneration Committee determines you were wholly or partly responsible;
- The payment of the award in whole or in part is not sustainable when assessing the overall financial viability of the Company; and
- The company or a material proportion of the group become(s) insolvent or suffer(s) a corporate failure so that ordinary shares in the company no longer have material value, and for which the Remuneration Committee determines you were wholly or partly responsible. (Executive directors only).

In the event that one of these is triggered, the Committee may, at its discretion, defer and/or reduce, in whole or in part any unvested award.

The events which may trigger clawback are as follows:

- There has been a material misstatement resulting in an adjustment in the audited consolidated accounts of the Company, or the audited accounts of any group member, for any financial year that was wholly or partly before the end of the period over which the related bonus or performance target(s) applicable to the award was assessed;
- The assessment of any performance target or condition in respect of an award or the information used to determine the related annual bonus and/or the number of shares subject to an award was based on material error, or materially inaccurate or misleading information;
- The company or a material proportion of the group become(s) insolvent or suffer(s) a corporate failure so that ordinary shares in the company no longer have material value, and for which the Remuneration Committee determines you were wholly or partly responsible;
- (a) Your action or conduct, in the reasonable opinion of the Remuneration Committee, amounts to fraud or gross misconduct; or (b) if you have left employment, the Remuneration Committee becomes aware of events or circumstances that, in its reasonable opinion, if you had still been in employment, would have amounted to fraud or gross misconduct;
- An event has occurred which is reasonably likely to cause serious reputational damage to the Company or any member of the group and for which the Remuneration Committee determines you were wholly or partly responsible; and
- The Company suffers a material loss, financial or otherwise, where you have operated outside the risk parameters or risk profile applicable to your position and for which the Remuneration Committee determines you were wholly or partly responsible. (Executive directors only).

In the event that one of these is triggered, the Committee may require the employee to repay all or part of a relevant award, and any associated dividend equivalents.

Link between reward and performance - financial year 2024

In the financial year 2024, the group delivered a resilient performance in an uncertain environment. In Banking, the adjusted operating profit performance increased 71% to £20.5.4 million. This reflected higher income, driven by loan book growth of 6%, a strong net interest margin

of 7.3% (2023: 7.7%), and a stable credit performance when excluding the non-recurrence of prior year impairment charges related to Novitas, with bad debt ratio of 0.9% (2023: 0.9%). Banking costs increased by 8% driven mainly by inflationary-related increases in staff costs, higher regulatory expenses and investment spend, partly offset by the progress we have made on our tactical and strategic cost management initiatives. CBAM delivered strong net inflows of 8%, although profit reduced, as income growth was more offset by costs primarily related to wage inflation and new hires to support future growth. Winterflood's performance remained impacted by lower trading income resulting from continued weakness in investor appetite and market uncertainty, with an operating loss of £1.7 million.

During this period of uncertainty, Close Brothers have been mindful of the need to retain and motivate our talented workforce to continue to protect the franchise, support our customers and to operate the business within our risk appetite. Recognising this context, we have continued to fund the bonus pool for colleagues to a limited degree, guided by affordability.

These factors were taken into consideration in determining bonus payments for the Material Risk Takers for the financial year.

The financial performance targets for the executive directors on the annual bonus were not met, and the out-turn under the strategic scorecard element of the bonus was 70% of maximum. This would have resulted in an annual bonus of 28% of the maximum opportunity. However, recognising that the group will not pay any dividend on its ordinary shares for the 2024 financial year, the executive directors and the Remuneration Committee agreed no bonus would be paid.

The 2021 LTIP was based on Adjusted EPS growth (35%), RoE (35%) and a scorecard of Risk Management Objectives (30%). The financial metrics were not met, reflecting the impact of the legacy issues that crystallised in the performance period. The Risk Management Objectives over the three year to 2024, were partially met. The Committee approved a modest vesting out-turn of 22%.

Annex XXXV: Encumbered and unencumbered assets

UK AE4 – Accompanying narrative information

(a) Information on asset encumbrance

Asset encumbrance is the process by which assets are pledged in order to secure, collateralise or credit-enhance a financial transaction from which they cannot be freely withdrawn.

There are no differences in the scope of consolidation for the purposes of asset encumbrance disclosures and those applied for accounting requirements.

Templates UK AE1, UK AE2 and UK AE3 use accounting values which reflect the median of the sums of the four calendar quarter-end values over the previous 12 months as per CRR disclosure requirements.

There are no differences between the treatment of transactions that have been pledged and transferred compared to their level of encumbrance and status.

(b) Information on the impact of the business model on asset encumbrance and the importance of encumbrance to the institution's business model

As an integral aspect of its business, the group engages in activities that result in certain assets being encumbered. The main activity relates to securitisation which is explained in Annex XXVII, and from accessing the Bank of England's TFSME of which more information is set out in note 26 of the group's Annual Report. The group also pledges assets for repurchase agreements and securities borrowing agreements, mainly in our Securities division. These assets are included in row 120 of template UK AE1 with the corresponding liabilities in template UK AE3.

GALCO monitors the level of encumbrance to ensure it remains within approved risk appetite limits which are based on loan book and balance sheet encumbrance levels. Further information on asset encumbrance and collateralisation can be found in note 26 of the group's Annual Report under the section "Assets pledged and received as collateral" and "Financial assets: loans and advances to customers".

Most encumbered assets disclosed in template UK AE1 are denominated in sterling with the majority of unencumbered assets included in column 060 available for encumbrance and only a small proportion of other assets deemed unavailable for encumbrance in the normal course of business (including derivatives, fixed assets, intangible assets and deferred tax assets).

Annex XXXVII: Interest rate risk in the banking book (IRRBB)

UK IRRBBA – IRRBB risk management objectives and policies

(a) How the group defines, measures, mitigates and controls IRRBB for the purposes of risk control and measurement

Interest Rate Risk in the Banking Book is the current or prospective risk to the group’s capital or earnings arising from adverse movements in interest rates applied to the group’s non-trading book.

Close Brothers' exposure to interest rate risk arises mainly in the Banking division and via funding activities in the holding company. Interest rate risk in the group’s other divisions is immaterial and accordingly the remainder of this section relates to the Banking division and the holding company.

The Board is responsible for setting the group's market risk appetite which includes interest rate risk in the banking book. The Board has delegated authority for recommending appetites consistent with the group's long-term strategy: for the Banking division to ALCO; and, for the group as a whole, and the holding company, to GALCO.

The group adopts a three lines of defence model to the management of market risk. In relation to IRRBB, Treasury engage in first-line responsibilities, with robust check and challenge performed by second line ALM Risk and Model Validation teams, and third line responsibilities discharged by Internal Audit. This governance structure is a key principle supporting the comprehensive risk framework together with policies, standards, metrics and limits.

The group has a simple and transparent balance sheet and a low appetite for interest rate risk that is limited to that required to operate efficiently. There are three sources of interest rate risk for the bank, which could adversely impact future income or the value of the balance sheet:

- **Repricing risk** - the risk presented by assets and liabilities that reprice at different times
- **Embedded optionality risk** - the risk presented by contractual terms embedded into certain assets and liabilities, and
- **Basis risk** - the risk presented by a mismatch in the reference interest rate for assets and liabilities.

Principle Risk	Mitigating Actions	Controls
Repricing Risk	<ul style="list-style-type: none"> • The bank’s strategy for IRRBB is to centrally manage and control interest rate risk by transferring risk from the lending businesses to the Treasury function. • Group policy is for Treasury to match the repricing characteristics of assets and liabilities naturally where possible or by using interest rate swaps where necessary. 	<ul style="list-style-type: none"> • Bank-wide EV and EaR metrics measure the effectiveness of risk transference and subsequent risk management. • Divisional business risk and compliance forums ensure repricing risk is transferred to Treasury within defined risk tolerances, with exceptions escalated in a timely fashion. • Dedicated first and second line functions ensure there is appropriate independent review and challenge of the risk transfer process, the centralised interest rate risk hedging, and the overall risk management process. • Exposures are monitored against a comprehensive set of EV and EaR limits.
Embedded Optionality Risk	<ul style="list-style-type: none"> • Certain lending products and Treasury instruments contain embedded optionality. • First and second line ensure the embedded optionality is consistent with the overall IRRBB strategy and within defined tolerances. 	<ul style="list-style-type: none"> • EV and EaR metrics, which are reported to ALCO and GALCO, include the impact of embedded optionality. • The impact of optionality is discussed at divisional risk and compliance forums and is also monitored by Treasury and Risk. • Additionally, optionality risk is covered in the annual risk assessment carried out by first line, and reviewed by second line, for each business.
Basis Risk	<ul style="list-style-type: none"> • Lending business predominantly price and fund off the same reference interest rate, consistent with the objectives of the risk transference process. • Treasury monitor and manage centralised basis risk exposure. 	<ul style="list-style-type: none"> • Business basis risk is monitored and challenged by local divisional risk and compliance forums. • Basis risk is calculated using an Earnings at Risk approach and is reviewed against limit by ALCO each month.

In line with the Risk Management Framework and Group Policy, the measurement techniques used include:

- Gap ladder analysis
- Earnings at Risk (Net interest income sensitivity)
- Economic Value
- Economic Value of Equity and the corresponding Supervisory Outlier Test
- Stress testing
- Sensitivity analysis, and
- Scenario analysis.

(b) The group's overall IRRBB management and mitigation strategies

Interest rate risk is governed by a committee hierarchy responsible for market risk strategy and the discharge of oversight by means of timely monitoring and reporting.

IRRBB Governance and Committees

The structure and organisation of the market risk management function (see also UK MRA in Annex XXIX for more information):

Divisional Risk and Compliance committees monitor market risk within the individual business units. The committees conduct timely reviews of local risk metrics and early warning indicators including escalating any breaches to GRCC as required.

Divisional limits and controls:

- Each business unit has procedures and controls in place to monitor its exposures
- Each business unit is responsible for the review of the completeness, accuracy and timeliness of the risk transfer to Treasury, in line with the bank's standards
- Business units operate within limits that are approved by the relevant divisional board or committee on an at least annual basis
- A business risk assessment is carried out each year by first line with the resultant report reviewed and challenged by second line. The final report is presented to the respective business Risk and Compliance forums, and Technical ALCO (TALCO).

GALCO and ALCO are responsible for monitoring the current and future risk profile within defined limits, for approving any changes to hedging strategies before implementation within the group and bank respectively, and for recommending risk appetite to the board. ALCO reviews and challenges the effectiveness of the IRRBB management and control framework, and ensures it is proportionate to the size, complexity and scope of the bank.

Technical ALCO (TALCO) is a sub-committee of ALCO. TALCO supports ALCO and the duties include the approval of less material matters, as well as reviewing technical issues such as model outputs. A summary of the main TALCO items is given to ALCO, along with the formal TALCO minutes for noting. TALCO will escalate agenda items to ALCO as deemed appropriate by either committee.

Regular risk reporting, recommendations and issues for escalation are presented to the Group Board Risk Committee via GRCC.

(c) The periodicity of the calculation of the group's IRRBB measures

The two main internal measures used for measuring IRRBB are Earnings at Risk (EaR) and Economic Value (EV):

- EaR measures short term impacts to earnings, highlighting any earnings sensitivity should rates change unexpectedly; and
- EV measures longer term earnings capacity, by estimating the present value sensitivity of the balance sheet, should rates change unexpectedly.

Earnings at Risk and Economic Value are both used to measure repricing and embedded optionality risk. There is also a separate Earnings at Risk metric for basis risk, measured in line with PRA guidance.

The above metrics are calculated at least monthly and reported against limits to ALCO monthly and GALCO quarterly.

Additionally, the bank also carries out the following calculations:

- The Supervisory Outlier Test where Economic Value of Equity (EVE) is compared to Tier 1 Capital. EVE is a variant on Economic Value, where capital is excluded from the calculation in line with the PRA Rulebook. EVE is calculated at least quarterly, applying where applicable, the principles outlined in Supervisory Statement SS31/15.
- In Treasury, where the interest rate risk is centralised, managed and hedged, EaR and EVE metrics are reported against Treasury sub-limits daily.
- Interest rate risk Stress testing, Sensitivity analysis, and Scenario analysis are carried out at least annually.

The bank also measures non-trading book credit spread risk using a methodology consistent with PRA requirements. Credit spread risk arises on the bonds held in the HQLA portfolio and specifically to the change in the value of a bond relating to a change in a bond's credit spread, which is the difference between a bond's total interest rate and the corresponding risk-free interest rate, and represents the perceived credit worthiness of that bond. The credit spread risk is measured and monitored daily.

A summary on the High-Quality Liquidity Portfolio and the corresponding non-trading book credit spread risk, is also presented to ALCO each month. This includes exposures, trends, and risk against the formal risk appetite limit.

(d) Interest rate shock and stress scenarios that the group uses to estimate changes in its economic value and in earnings

The group calculates Economic Value using the six prescribed interest shock scenarios outlined in the PRA Rulebook and four internal scenarios. The PRA shocks are:

- Parallel shock up
- Parallel shock down
- Steepener shock
- Flattener shock
- Short rates shock up
- Short rates shock down

The four internal scenarios are 'All rates increase 50bps', 'All rates increase 200bps', 'All rates decrease 50bps', and 'All rates decrease 200bps'.

Earnings at Risk is measured using the PRA Rulebook scenarios 'Parallel shock up' and 'Parallel shock down' as well as the four internal scenarios noted above.

(e) A high-level description of key modelling and parametric assumptions used in calculating change in economic value of equity (Δ EVE) and change in net interest income (Δ NI) in template UK IRRBB1

The change in Economic Value of Equity (EVE) and the change Earnings at Risk (EAR) are calculated in line with PRA guidance. Both measures represent the difference between the stressed scenario estimate and the base scenario estimate.

The key Economic Value of Equity assumptions are:

- A run-off balance sheet i.e., once balances mature, they are not replaced.
- Equity is excluded.
- Assets and liabilities are behaviouralised using the PRAs Standardised scaling parameters.
- The impact of any embedded options within the banks' assets and liabilities are included.
- There is no management action in response to the stress scenarios.

The key Earnings at Risk assumptions are:

- The risk is measured over a 1-year time horizon.
- A constant balance sheet where maturing balances are replaced by a product with the same notional amount.
- Commercial margins are included.
- The Impact of any embedded options within the banks' assets and liabilities are included.
- There is no management action in response to the stress scenarios.

(f) Modelling assumptions used in the group internal measurement systems (IMS) for purposes other than disclosure that differ from the modelling assumptions prescribed for the disclosure in template UK IRRBB1

The bank has implemented an ALM system to identify, evaluate and measure IRRBB exposure. When measuring the change in Economic Value of Equity for external disclosure, there are two differences, as compared to the internal Economic Value metric:

Firstly, for Economic Value of Equity, capital is excluded while for internal Economic Value, capital is profiled in line with group usage. This has the impact of producing a higher risk number for the change in Economic Value of Equity.

Secondly, for Economic Value of Equity, the behavioural profile is calculated using the PRA's Standardised scaling parameters, while for Economic Value, internally generated prepayment and attrition assumptions are used.

(g) How the group hedges its IRRBB, as well as the associated accounting treatment

The Treasury function is responsible for hedging the non-trading book interest rate risk within approved EaR and EV limits. It does this through naturally matching assets and liabilities where possible, with any residual risk being hedged utilising vanilla derivative transactions. Where possible assets are hedged on a portfolio basis, which in turn reduces execution costs and improves balance sheet efficiency.

Where there is a specific material gross exposures, Treasury hedge on a back-to-back basis with an external derivative hedge. Partial hedging is also executed when part of the loan position can be naturally matched.

Where possible derivatives are designated into hedge accounting relationships (Fair Value and Cash Flow hedge accounting). Details of the accounting treatment of derivatives and hedge accounting is set out in note 26 of the group's Annual Report

(h) Other information regarding significance and sensitivity of the IRRBB measures**EVE Sensitivity**

The group measures EV sensitivity, in line with its internal risk appetite, on a monthly basis and EVE sensitivity at least on a quarterly basis.

EVE measures the change in the value of the Group's assets and liabilities under prescribed stress scenarios, with equity excluded from calculations.

The most severe EVE scenario from table IRRBB1 below is 'Parallel shock up' encompassing an instantaneous 250bp increase in interest rates across the yield curve for GBP. This scenario produces an EVE sensitivity of £(74m) and corresponds to 4.7% of the group's Tier 1 capital, comfortably within the regulatory 15% threshold.

EVE sensitivity for the 'Parallel shock up' increased by £24m compared to 31 July 2023. This was mainly due to the increase in equity and the lengthening of the equity structural hedge.

NII sensitivity

The group measures NII sensitivity on a monthly basis against internal risk appetite.

The group measures NII over a 12-month period assuming a constant balance sheet.

The most severe scenario for the group is a 'Parallel shock down' which produces a NII sensitivity metric of £(7m). This represents a potential reduction in income of £7m should rates decrease instantaneously by 250bps across the yield curve.

The 31 July 2024 NII sensitivity decreased compared 31 July 2023, and reflects the group's strategy to manage and minimise interest rate risk, to that required to operate efficiently.

The group's sensitivity calculations are impacted by a number of factors which include balance sheet mix, timing of assets and liabilities maturities and product pricing. Due to these factors, the NII sensitivity should only be taken as an indicative guide to future performance.

(i) Average repricing maturity assigned to non-maturity deposits (NMDs)

The average repricing maturity assigned to non-maturing deposits is 0.2 years (as at 31 July 2024) which includes both rate sensitive balances and stable rate insensitive balances.

(j) Longest repricing maturity assigned to NMDs

The longest repricing maturity assigned is 5 years.

UK IRRBB1 – Quantitative information on IRRBB

UK IRRBB1 shows the 31 July 2024 and the 31 July 2023 group figures.

Glossary and Definition of Key Terms

Additional Tier 1 ("AT1") capital	Additional regulatory capital that along with CET1 capital makes up a bank's Tier 1 regulatory capital. Includes the group's perpetual subordinated contingent convertible securities classified as other equity instruments under IAS 32
Applicable requirements	Applicable capital ratio requirements consist of the Pillar 1 requirement as defined by the CRR, the Pillar 2a requirement set by the PRA, and the capital conservation buffer and countercyclical buffer as defined by the CRD. Any applicable PRA buffer is excluded
Capital Requirements Directive V ("CRD V")	European Union regulation implementing the Basel III requirements in Europe, alongside CRR II
Capital Requirements Regulation ("CRR")	Capital Requirements Regulation as implemented in the PRA Rulebook CRR Instrument and the PRA Rulebook CRR Firms: Leverage Instrument (collectively known as "CRR")
CET1 capital ratio	Measure of the group's CET1 capital as a percentage of risk weighted assets, as required by CRR
Common equity tier 1 ("CET1") capital	Measure of capital as defined by the CRR. CET1 capital consists of the highest quality capital including ordinary shares, share premium account, retained earnings and other reserves, less goodwill and certain intangible assets and other regulatory adjustments
Expected credit loss ("ECL")	The unbiased probability-weighted average credit loss determined by evaluating a range of possible outcomes and future economic conditions
Financial Conduct Authority ("FCA")	A financial regulatory body in the UK, regulating financial firms and maintaining integrity of the UK's financial market
Forbearance	Forbearance occurs when a customer is experiencing financial difficulty in meeting their financial commitments and a concession is granted, by changing the terms of the financial arrangement, which would not otherwise be considered
Gross carrying amount	Loan book before expected credit loss provision
High quality liquid assets ("HQLAs")	Assets which qualify for regulatory liquidity purposes, including Bank of England deposits and sovereign and central bank debt
Internal Capital Adequacy Assessment Process ("ICAAP")	An annual self-assessment of a bank's material risks and the associated level of capital needed to be held, and undertaking appropriate stress testing of capital adequacy
Internal Liquidity Adequacy Assessment Process ("ILAAP")	The processes for the identification, measurement, management and monitoring of liquidity
Internal ratings based ("IRB") approach	A supervisor-approved method using internal models, rather than standardised risk weightings, to calculate regulatory capital requirements for credit risk
International Financial Reporting Standards ("IFRS")	Globally accepted accounting standards issued by the IFRS Foundation and the International Accounting Standards Board
Leverage ratio	Tier 1 capital as a percentage of total balance sheet assets, adjusted for certain capital deductions, including intangible assets, and off-balance sheet exposures
Liquidity coverage ratio ("LCR")	Measure of the group's HQLAs as a percentage of expected net cash outflows over the next 30 days in a stressed scenario
Loan to value ("LTV") ratio	For a secured or structurally protected loan, the loan balance as a percentage of the total value of the asset
Net carrying amount	Loan book value after expected credit loss provision
Net stable funding ratio ("NSFR")	Regulatory measure of the group's weighted funding as a percentage of weighted assets
Prudential Regulation Authority ("PRA")	A financial regulatory body, responsible for regulating and supervising banks and other financial institutions in the UK
Risk weighted assets ("RWAs")	A measure of the amount of a bank's assets, adjusted for risk in line with the CRR. It is used in determining the capital requirement for a financial institution
Standardised approach	Generic term for regulator-defined approaches for calculating credit, operational and market risk capital requirements as set out in the CRR
Subordinated debt	Represents debt that ranks below, and is repaid after claims of, other secured or senior debt owed by the issuer
Term Funding Scheme for Small and Medium-sized Enterprises ("TFSME")	The Bank of England's Term Funding Scheme with additional incentives for SMEs
Tier 2 capital	Additional regulatory capital that along with Tier 1 capital makes up a bank's total regulatory capital. Includes qualifying subordinated debt

Abbreviations

Abbreviation	Brief description	Abbreviation	Brief description
